

WORKBOOK

2026 COLLECTION

The FIVE brand, available in 50 countries across five continents, bases its development on a simple principle: you can't design a pair of gloves like you design an item of clothing.

When you're on a motorbike, the glove isn't just an accessory, it tells the bike how you're feeling. Whether you're overtaking, braking as you reach a bend or

making sure you get every last bit of juice from the engine, it's responsible for so many decisions that can influence performance and safety. That's why FIVE's sole aim is to develop and produce the most advanced gloves, using cutting-edge technology and drawing on our wealth of racing experience. Comfort, protection, precision, design... your hands will feel the difference!

RACING

FROM MOTOGP RACING TO EVERYDAY SPORT RIDING

This range is the product of FIVE's experience at the very highest level of international competition. Across all disciplines, MotoGP, Superbike, Supersport, and Endurance, gloves from the Racing range are designed for precision steering, both on the track and on the road*.

They offer riders guaranteed efficiency, high performance, and protection. Maybe you'll never ride on a track, but what does it matter? Though some of our Racing gloves are clearly made for competition, others are more multi purpose in nature and will be perfect at the helm of your own machine for everyday riding... as long as you have that sport bike spirit.

Many famous riders have chosen FIVE gloves during their careers, and each of them has contributed to the development of the styles you'll discover today. Some of the big names include: Andrea DOVIZIOSO, Stéphane CHAMBON, Fabio QUARTARARO, Peter HICKMAN, Dominique AEGERTER, Adrian HUERTAS and many others. With their help, we're proud to present the most advanced Racing range that has ever been made for mass production.

The RACING collection includes three sub-categories: RACING Performance gloves are designed to perform on track and on road, offering different levels of protection, while RACING Sport gloves are designed more specifically for road sport use. RACING WP models are waterproof gloves allowing to ride a sport bike on road to stay dry when it rains.

** Piloting a sport bike involves risk. FIVE gloves that are CE-certified, CE KP1 or CE KP2, are designed to reduce the effects of a fall; nevertheless, no glove can completely prevent the risk of injury. Ride safely!*

Adrian HUERTAS – RFX1 EVO
2024 Supersport World Champion

RFX RACE

The most protective glove in the world thanks to its Carbon technology

The most advanced of all FIVE ADVANCED GLOVES™. Designed for high performance, the RFX Race offers the highest level of protection, due specifically to its triple shell in Thermoset Carbon Composite, a material used in aerospace and Formula 1.

STREET

FOR EVERYDAY RIDING THAT'S FUN AND DYNAMIC.

The STREET collection is made for those who ride over short-to-medium distances in the city or outside of it, taking a fun and dynamic approach that needs protective gloves for maximum riding pleasure (and safety) at the controls. The street is their natural domain, but their field of play may be even greater... Just as comfortable in town and around its outer edges for quick trips as they are on side roads out to explore, and even on the track, for the high-performance fans among them.

Proud owners of roadsters, supermotos, or maxi-scooters will naturally gravitate toward the STREET Performance category, for gloves inspired by our competition styles, recognizable by their protective shells in sleek shapes and leather palms, which offer a superior level of safety that's sure to satisfy the most demanding technical riders. These gloves include the SF series, crowned with 14 Supermoto World Championship trophies, alongside the SF1, which could be described as a "short Racing glove" that's ideal for track riding, or the new-gen STUNT, an iconic style from the brand, designed to conquer the city...frequently emulated, but never equaled!

The STREET Sport segment brings together our textile or combined leather-and-textile gloves, whose protective shells with softer styling have become more subtle and discreet. These are for riders who take on the streets and roads in a multitude of ways (from motorcycles to scooters, and pocket bikes to big beasts, along with new electric mobility solutions...), ensuring their comfort and safety and attempting to keep a look that's both modern and sporty.

The STREET-WP segment includes gloves featuring a breathable, weatherproof membrane, commonly known as "mid-season" gloves, essential for worry-free rides as soon as the weather takes a turn for the worse (cold air, wind, moisture...).

P.S.: Take a look at the new, standalone URBAN collection (now distinct from the STREET collection), offering a more classic, fashion and urban-oriented style, which you'll find in the next few pages.

SF1 EVO

The short, high-performance glove for roadsters, sportbikes and supermoto bikes

The SF1 EVO is the "short" version of the RFX1 EVO (Racing). Designed for hard-core riding, it offers all the characteristics of a high-performance glove, without the bulk. It's a worthy successor to the SF1 and its 14 S1 World Championship titles.

URBAN

URBAN RIDING WITH ELEGANCE.

The URBAN collection is made for those who ride two-wheeled vehicles in urban or suburban settings and are looking for a certain elegance that also combines protection, practicality, and a pared-down aesthetic.

The styles that are part of this collection are meant to enhance your riding experience, focusing on natural materials such as full-grain leather, or taking maximum advantage of modern technical fibers. They're also protective, with ergonomic shells discreetly integrated into the structure of the glove and concealed beneath the leather or fabric, for resolutely urban flair.

The goal here is to make your gloves blend in with your everyday looks when heading out in the city, to the office, or to a meeting. These gloves come in muted shades such as black, grey, brown, or khaki...

They can be worn to pilot a scooter or a motorcycle, so long as your priorities are comfort, an enhanced ride, and, of course, style!

Though they may have a conventional look, these styles are infused with all of FIVE's expertise in terms of safety and perfect fit, as well as the latest innovations introduced by the brand for better riding (Touch Screen™, Pull'N'Ride™, etc...).

The URBAN WP collection is comprised of gloves featuring a breathable, waterproof membrane, and, in some cases, thermal insulation, so you can run around town with peace of mind when the weather is rainy or cold...and always with total elegance.

SPORTCITY EVO

An elegant, protective Classic

Its predecessor was named "best city glove"* and SPORTCITY EVO is even more attractive, with its perforated leather topside construction and discreetly concealed shell. Now, it offers the epitome of two-wheeled elegance.

2026 COLLECTION

CUSTOM

CUSTOM IS ABOUT LOVING THINGS MADE JUST FOR YOU.

Custom culture is the idea of finding that special something made just for you. So, it was logical that FIVE would create a collection of gloves aimed at enthusiasts of custom, vintage and new-retro motorcycles, depending on what you prefer to call it.

This is a range where you'll find the glove that matches the style of the motorbike. Beautiful design, high-quality, authentic materials, mainly full-grain leather, chosen for its extreme flexibility and durability, all coupled with an excellent finish, are the hallmarks of the Custom collection. As glove specialists, FIVE offers lots more than normal custom gloves: it has poured all its expertise in terms of fit, comfort and safety into this Custom range.

KANSAS

Our most protective custom glove

The KANSAS, in full supple goat leather, offers maximum protection with a metacarpal shell and multiple reinforcements, and comfort and a stellar fit, with its external seams and comfort gussets. In other words, it's the perfect combination.

Brown

TRAIL ADVENTURE

EXPLORE THE WORLD WITHOUT LEAVING YOUR COMFORT ZONE.

The world is such a big place, and the planet is so beautiful, that it would be tempting to set off on a voyage to discover its many wonders. With some machines, you could easily gobble up the miles, on the asphalt or on dirt tracks, exploring every last nook and cranny of it.

Riding long-distance, through different lands and varied terrain, requires first-class equipment. Gloves from the TRAIL ADVENTURE collection prove to be as multifunctional, comfortable, and tough as the motorcycles made for extensive travel. These gloves offer unprecedented technical solutions that allow them to traverse big country, just as they can be effective for every day. Because you don't necessarily have to ride for thousands of miles (or kilometers) to fully enjoy the virtues of our TRAIL ADVENTURE gloves. Sometimes, adventure and escape start at the end of your street... or just in your head.

TFX1 GTX

The ultimate Trail-Adventure glove for exploring the globe

The TFX1 GTX is engineered for long-distance trail trips. It offers comfort, safety, robustness, and watertightness. Made from water-repellent fabric and goat leather, it includes a GORE-TEX® Grip™ membrane and premium protection to face any weather conditions.

2026 COLLECTION
NEW RANGE

TOURING

ROAD TRIPPING ON A MOTORCYCLE IS A TRUE SENSORY EXPERIENCE.

Besides being a marvelous way to get around, riding a motorcycle is an invitation on a journey, a way to discover places and escape, and a symbol of freedom. For all those looking to explore the world's most beautiful roads without ever taking a turn off the asphalt, whether it's at the controls of a Grand Tourer motorcycle or a powerful trail bike, FIVE dedicates this Touring collection to gloves designed for purely road-oriented long-distance rides.

Whether you're exploring winding mountain roads, crossing endless plains, or following wild coastlines, the pleasure of riding a motorcycle on the road is, more than anything, a sensory experience. But to fully savor each kilometer, you need to choose equipment that guarantees comfort, protection, and effectiveness, no matter the conditions. It's with this philosophy in mind that FIVE designed its first two Touring styles, the GT1 and GT2.

Developed specifically for long-distance rides, these gloves are crafted for facing any challenges you may encounter on the road, whether it's changing weather conditions or the inherent risks of riding a large, powerful motorcycle. Using innovative materials and advanced technology, these gloves offer maximum protection from bad weather, while ensuring a high level of safety when you ride or in case of a fall.

Comfort is obviously at the very heart of this collection. These gloves, which are true allies for the touring motorcyclist, will allow you to ride for hours without feeling the slightest discomfort, thus reducing your level of fatigue. Their ergonomic design guarantees impeccable grip and enhanced control sensitivity, so that each trip is a unique experience, with no need to compromise.

With these Touring gloves by FIVE, you can hit the road in total peace of mind, ready to discover the world, excellently protected and comfortably ensconced at the controls of your favorite (GT or not) road bike.

GT1 EVO GTX

The Gore-Tex® GT glove that will take you to the ends of the earth

As the ultimate road touring glove, packed with innovations, the GT1 EVO GTX has all you need to rack up the miles in total comfort: supple leather and Syntech Skin™ construction, a GORE-TEX® Grip™ membrane, lightweight Primaloft® 80 g thermal insulation, ERGO PRO-TECH® protective shells in D3O®, and an ergonomic screen wiper. We've taken it the extra mile...so you can travel very far!

WINTER

ENJOY RIDING IN COLD WEATHER.

In the winter, more than any other time of the year, riding requires serious steering skills. The slippery street and road surfaces mean that ugly surprises await you at every turn.

The wind and the extra-low temperatures assault your extremities, starting with your hands, and can affect your reflexes. So, winter calls for specially designed and adapted equipment. The effectiveness of a winter glove lies not only in its thickness, but in a plethora of details that make a difference once you start riding in the cold. This is exactly what we offer in our winter range. It includes a glove for every circumstance, and on each and every one, we aim for a perfect balance: quality materials / thermal insulation / weatherproofing / comfort / steering sensitivity / protection.

You will also find some of our winter gloves aimed to riding in the city in our URBAN range.

WFX PRIME EVO GTX

The new-gen winter glove that keeps you even warmer

The WFX PRIME EVO GTX offers the very best to face the winter cold. Made of goat leather and Softshell fabric, it includes a GORE-TEX® membrane, Primaloft® thermal insulation, and FIVE Thermo+™ construction for unparalleled comfort in the cold.

HT
HEATING
TECHNOLOGY

HEAT TECHNOLOGY

WINTER RIDES?... FEEL THE HEAT.

In 2023, we've totally revamped our range of heated gloves, in a desire to make them even safer, more practical, and high-performance.

The four styles that make up our HG range share a common set of characteristics, including:

- ERGO PROTECH™ protective elements
- PRIMALOFT® thermal insulation
- The 5_DRYTECH™ waterproof, breathable membrane (except for the HG Prime GTX, which features a GORE-TEX® membrane)
- The latest generation of our FIVE battery-powered heating system that includes an electrical-filament circuit that goes over the back of your hand and down the fingers, all the way to the inside of the last finger
- A new design that lets you to recharge your batteries while you ride. (Using the optional Connection Kit cable, which you can purchase from your FIVE reseller)
- And lastly, our brand-new DUAL CONTROL adjustment and control system.
- Each style then stands out due to its external construction and a few details related to design, materials, or finish.

The HG Prime GTX epitomizes the modern spirit and heads up the range with its GORE-TEX® membrane, heat-sealed, seamless Softshell topside construction inspired by extreme sports, and full-grain leather palm.

The HG1 Evo WP gives pride of place to leather, using it both for its topside construction and on its palm. It also features a 5_DRYTECH™ waterproof, breathable membrane, like its lower-end siblings.

The HG2 Evo WP blends nylon topside construction with a leather palm, offering riding pleasure to a wider audience.

The HG3 Evo WP, the most affordable style in the range, which is also available for women as the HG3 Evo WP Woman, opts for a "no-leather" vegan solution, with nylon topside construction and a Nash synthetic palm.

Each style is perfectly positioned to offer the best possible value for money, depending on your preferences and your budget, whether you love the most advanced products like the HG Prime GTX, reliable choices like the mostly leather HG1 Evo WP, versatile options like the HG2 Evo WP, or affordable, entry-level styles like the HG3 Evo WP.

You will also discover our latest HG model included in the Urban collection : HG Metro WP.

HG1 EVO WP

The heated glove focused on leather, with an aluminum insert

The HG1 EVO WP is the heated glove that makes the most of leather, both for its topside construction and on the palm, with HG Dual Control™ technology, a 5_DryTech™ membrane, PrimaLoft® Gold insulation, ERGO PROTECH® protection, and modern features.

WOMAN

IT'S NOT JUST ABOUT RIDING STYLE, BUT ALSO ABOUT RIDING WITH STYLE!

Riding a motorcycle isn't just for men anymore, and, fortunately, women are now flocking to riding in record numbers. And not just as passengers. More and more of you are taking the controls, and we're simply delighted.

Our Woman range has been designed just for you. Though certain styles feature the technical characteristics offered by our gloves for male riders, their overall shape, fit, and look are customized to the hands and tastes of female riders. Because, even at the controls of a motorcycle, a woman should never have to sacrifice a certain form of elegance.

A woman's hands say so much about her personality, so it makes sense to treat them with the greatest of care by protecting them appropriately against bad weather or the risks associated with a fall. Whether you're riding a two-wheeled vehicle for practical purposes or because motorcycles are your number-one passion, and whether you ride on the track at the controls of a sport bike, in the city on your scooter, or you're exploring the world on a powerful trail bike, our Woman range allows you to choose the glove that's best suited to your type of riding and the season.

Discover our selection of women's styles crafted using the FIVE approach that seeks to offer the best possible combination of comfort and protection through the sub-collections within the Woman range: Racing, Street, Urban, Trail-Adventure, and Winter.

Our intent is to offer you the ideal glove, one that's both high-performance and elegant.

RFX1 EVO WOMAN

The future of Racing gloves

More than just an evolution, it's a revolution! Our most popular racing glove stays ahead of the pack with this new-gen design. It redefines performance standards by offering unprecedented comfort and precision.

TECHNICAL GLOSSARY

5_DRYTECH™ – Weatherproof / breathable and windproof membrane developed by FIVE specifically for two-wheeled vehicles. Allows perspiration to evaporate, while it stops raindrops from getting into the glove. Attached to the external structure and the lining of the glove with adhesive strips, so that it really stays put.

5_WarmTech™ – Specific 3-D polyester fiber, developed by FIVE, based on our experience in bike riding, to thermally insulate and protect from the cold. Placed between the breathable, weatherproof membrane and internal lining of the glove, this synthetic fiber traps the most effective of all insulating: air (and the natural heat from the hand)! Available in different densities and weights adapted to the different areas of the glove.

AirGO PROTECH® – A protective shell crafted by FIVE, with a trade-marked design, offering superior ergonomic and protective qualities, which includes an air inlet to promote ventilation of the hand.

Airprene® – Ultra-stretch polymer foam that offers excellent support, with a microcellular structure and perforations that ensure optimal air and moisture flow. We use it most often for the support and breathability it provides on the wristband.

Anti-twist ties – An element connecting the little and ring fingers, to stop the little finger from being x away from the hand in the event of a fall. Made from leather, in an accordion shape (a FIVE innovation) on our Racing gloves, in order to limit the range of motion without being constricting.

AX® Suede – A synthetic material made from polyester microfiber. An alternative to suede leather that offers the advantage of being machine washable. Designed to enhance functions such as dexterity, flexibility, skid resistance, moisture management, etc. Comes in many varieties, with many possible applications.

Bemberg™ / Micro Bemberg™ – An artificial textile fiber obtained from natural materials, including cellulose from a variety of botanical sources, and featuring a silky texture, used as a lining inside gloves in order to offer a pleasant and comfortable contact zone.

Carbon PVC – A protective element consisting of a carbon sheet between two layers of PVC, which gives it an optimal firmness/flexibility ratio. We often include a carbon PVC shell at the hypothenar, which we also call a palm «slider».

Carbon Thermoset – Thermoset carbon passed through an autoclave, originating from Italy. Used in aeronautics, Formula 1, and Moto GP. Used in the protective shells of our high-end Racing style, the RFX Race. Offers high skid resistance, extremely light weight, and an exceptional level of protection.

Cat Eye™ – A polyester-based synthetic fabric with a structured upper surface.

Clarino® – A synthetic material that emulates natural suede leather, used on the palm side for its comfort, skid resistance, and excellent grip. Machine washable.

Clear Vision Pad™ – A micro-terry cloth fabric panel that allows you to wipe off your helmet's visor or mask while riding. (A FIVE brand name)

CONNECTION KIT – Optional cable-connection kit that allows for the connection of FIVE HG heated gloves to the battery or cigarette lighter socket on the motorcycle.

Cordura® Stretch – Cordura®. A heavy-duty fabric that offers elastic qualities in its Stretch version.

DUAL CONTROL – Heating control system using a single button (implemented on the new generation of FIVE HG heated gloves) that allows for simultaneous control of the heating level in both gloves with a single button on the right hand, since both gloves are wirelessly connected.

Embossed – A textured effect that highlights a decorative element (logo or other).

ERGO PROTECH® – A protective shell crafted by FIVE, with a trademarked design, that can be visible or concealed under fabric or leather, offering superior ergonomic and protective qualities. Available in one-piece or double versions. The single-shell TPR versions include an internal honeycombed structure for optimal shock absorption. (A FIVE brand name)

GORE-TEX® GRIP Fully bonded – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Fully molds to the shape of the palm for exceptional user comfort and enhanced touch sensitivity.

GORE-TEX® GRIP Partially bonded – A weatherproof / breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Partially molds to the shape of the palm, so that it really stays put.

GORE-TEX® – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge.

GUTTERMANN® – A stitching thread originating from Germany. Used on our high-performance gloves due to its superior tear resistance and ability to limit the risk of cuts in the event of an accident.

HG / Heating Technology – Heating glove. Heating technology. A glove that is heated by resistors and either a self-contained battery or mini-cigarette lighter power cord. It's possible to adjust the level of heat by favoring the perceived temperature or the battery life. (A FIVE brand name)

HIPORA® – A weatherproof/breathable membrane offering excellent weather-resistance and breathability.

Hypothenar – A part of the hand that includes a group of muscles that govern the movements of the little finger.

KEVLAR® – A synthetic fiber that is extremely resistant to tearing, perforation, and skidding, made from aramid resin. This high level of toughness makes it a material used in, as one example, the manufacture of bullet-proof vests.

KEVLAR® stretch – Kevlar® fiber featuring elastic qualities.

Leather / Goat – Leather used to make our gloves, due to its superior suppleness.

Leather / Cowhide – Leather used to make our gloves, due to its superior toughness and durability.

Leather / Digital – Leather whose surface is laser-embossed to create a multitude of tiny prints to enhance grip on the controls in wet weather.

Leather / Full-grain – Leather that has its upper layer intact, thus featuring all the natural irregularities of the animal hide.

Lycra® – A synthetic fiber with elastic properties. We use it in the areas that require perfect elasticity, such as finger contours or the wrist opening.

Memory foam – A material made of viscoelastic foam that recovers its original shape when it is deformed. We use it in the zones that require impact absorption or as a comfort element.

Mesh Fabric – A honeycombed fabric that eases airflow.

Mesh Fabric 3D – A honeycombed fabric that eases airflow, with cells that feature a bulky texture.

Metacarpals – The set of bones that form the structure of the palm of the hand, located between the fingers and the wrist.

Nanofront® – A premium material from Japan, introduced by FIVE within the palm of our high-end motocross gloves, chosen for its exceptional anti-skid, slimness, suppleness, moisture absorption, and thermal barrier properties. Made up of fibers measuring 700 nanometers in diameter.

Nubuck – A leather finish that features a velvety effect obtained through scraping / polishing of its upper surface.

Over Size Cuff – A zipper adjustment system that allows you to expand your glove's cuff so that it more easily covers your jacket sleeve.

One Way Stretch™ – Stretch material that is inserted at the fourchettes zone (between fingers) of some models for optimal flexibility.

Palm reinforcement – Leather, fabric, or PU Grip elements that are designed to enhance the comfort of the glove on the palm side, its grip, and its chafe resistance.

Primaloft® – The best alternative to eiderdown, without its drawbacks. A high-performance thermal insulation material made from a trademarked synthetic microfiber. Developed in 1983 for the U.S. Army as an alternative to goose down, synthetic, insulating, and water-resistant. Offers a high level of comfort in cold weather by retaining the hand's natural heat. Available in different varieties and densities.

PU – Polyurethane. A flexible plastic material.

PU GRIP – A Polyurethane panel whose surface features hollow and textured dots that give it excellent grip in wet conditions. material.

Pull'N'Ride™ – A pull-tab that makes slipping on a glove easier. (A FIVE brand name)

PVC – Polyvinyl chloride. A highly stable plastic material that exists in rigid or flexible forms.

Reflective – Reflective elements that mirror headlight brightness, to make motorcyclists visible to others on the road during night-time riding.

Spandex™ – A Lycra®-based synthetic material, renowned for its elasticity. Used to enhance elasticity over a specific part of the glove.

Spandex™ 4-Way – A Lycra®-based synthetic material, renowned for its elasticity. Stretches in 4 different directions (up-down and left-right). Used to enhance the overall elasticity of the glove.

SuperFabric® – A material that is highly resistant to skids and to sharp or pointed elements, made of a fabric base whose surface is covered with a multitude of textured resin dots that form a protective barrier. It is also weatherproof and breathable. We use it mostly on our high-performance gloves.

SYNTECH SKIN™ – A synthetic material that offers a look and feel similar to natural leather, but with superior cut and tear resistance properties.

Synthetic Leather – For FIVE, a fine substitute for natural suede leather. Used mainly on the palm side due to its elasticity, durability, and comfort. Machine washable. A vegan material.

Thermo+ – An innovative FIVE concept in winter glove insulation that reduces heat loss between the fingers and offers up to 20% thermal gain. Unlike in classic glove construction, the area between the fingers hosts insulation that is equivalent to that on the topside of the hand and not the thinner insulation on the palm. The resulting insulation creates a more efficient thermal barrier that keeps the hand's natural heat inside the glove.

Thenar – The rounded, muscular mound on the upper part of the hand, underneath the thumb.

Touch Screen™ – The inclusion of elements that allow for the handling of touchscreens without removing your glove. It is most often found on the index or the index finger and thumb, depending on the particular style of glove. (A FIVE brand name)

TPR – Thermo-Propylene Rubber. A material that can be molded or extruded above its melting point. Used as a decorative or protective element on our gloves.

TPU – Thermo-polyurethane. A plastic material that can be variably firm or flexible, obtained through thermo-molding. We use it for some of our protective shells.

V-Entrance™ – A specific method of assembling the wristband elements, developed by FIVE to make it easier to slip on the glove. (A FIVE brand name)

Vegan Friendly – A synthetic glove that contains no elements of animal origin in its composition.

Velcro – A contact closure system using tiny hooks and textile loops, commonly known as «scratch» in French.

VIBRA-LESS™ – Anti-vibration pads integrated into the palm, to reduce any vibration felt at the controls.

Water-repellent fabric – Fabric with a texture that allows water droplets to slip over its surface and thus slow their penetration into the glove.

WP – Weatherproof. A glove that features a waterproof, breathable membrane and can be used in the rain, because it keeps hands dry.

All brands or products mentioned in this glossary are the property of the firms, suppliers, or partners of FIVE Gloves or of its manufacturing units, and are mentioned for informational purposes.
