HEADOFFICE + DISTRIBUTION CENTRE
THE NETHERLANDS
FROM VEGHEL WITH LOVE

You probably know about Amsterdam and Assen, but what about the most innovative region of The Netherlands? Eindhoven is indeed leading when it comes to innovation, but there's another town not far away where the real magic happens.

In the town of Veghel, there's a state-of-the-art headquarters with showroom and distribution centre located right next to the motorway to Eindhoven. It is easily recognised by its yellow and grey cars and a number of motorcycles parked by the fishpond.

Enter MACNA HQ; where nearly 80 motorcycle aficionados are working tirelessly to make the lives of motorcyclists around the world more enjoyable by designing and developing the safest, most innovative and best-looking riding gear possible.

That's what we call a proper (work)place to have fun!

SHOWROOM 2.0

When you walk through the doors of MACNA HQ, you will enter a true Valhalla of riding gear. Everything a rider needs for the perfect ride out - apart from the weather.

Our collection of riding gear keeps expanding every year, so we needed to make sure we had enough space for at least another year or two. That's why recently, we've fully renovated our showroom, making it bigger, better and even more beautiful. A masterpiece on its own, if we may say so ourselves.

Wander through our spectacular, brand new 500 m2 of showroom and admire our latest collection on display. You'll feel like a little kid in a candy shop.

MACNA VANTAGE POINT

MACNA Vantage Point is our new strategically located operation in the heart of the (Italian) motorcycle gear industry. It is - in fact - the center of the Italian fashion industry all together.

This all started in the 1500's during the Renaissance and has resulted in centuries of know-how on how to create well-fitting garments of high quality. By moving here with a Vantage Point, we aim to incorporate this region's expertise on technical (motorcycle) garments into our own DNA.

MVP is the development centre for tailor-made racing suits for our professional riders. The increased freedom regarding prototypes will allow us to perfect the fit, quality and safety. These improvements will be implemented in our riding gear in the form of innovative technology you've come to expect from us.

In tune with the above, MVP will also function as central point for race support and as testing centre, to make sure all our garments comply with CE legislation.

That is what we call the next step in development!

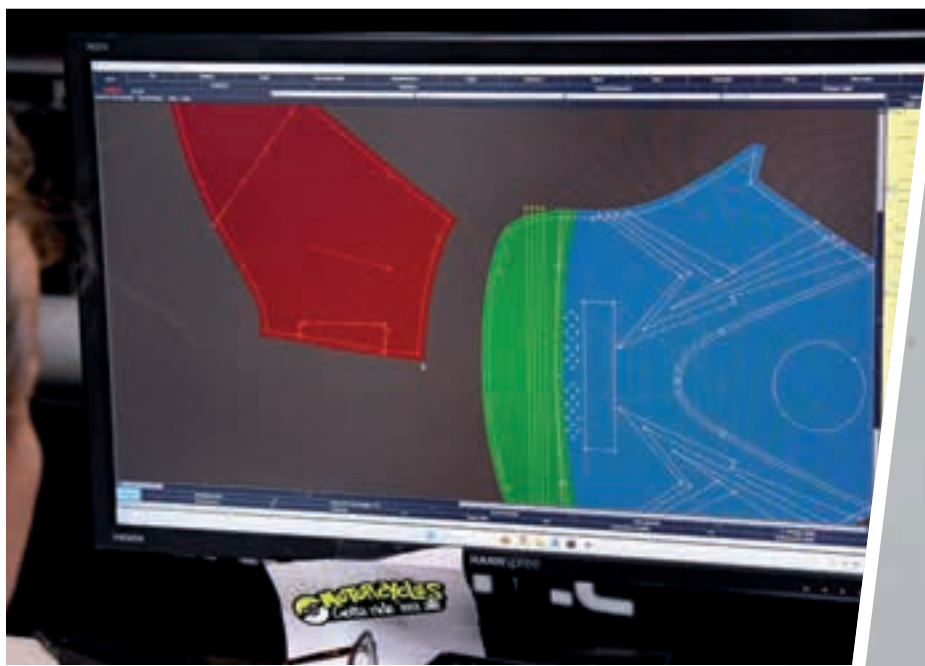

PRE PRODUCTION

It all starts with the receipt of a request. As every rider's body differs from another, the first step is taking the right measurements. After that, it's time for the design, based on the client's preferences. Before a design is adjusted and refined, a fitting session is planned to make sure the measurements are correct.

When all steps are completed successfully, the measurements are entered into a program called CAD. This program makes sure the leather panels are cut perfectly so that the suit will have the perfect dimensions.

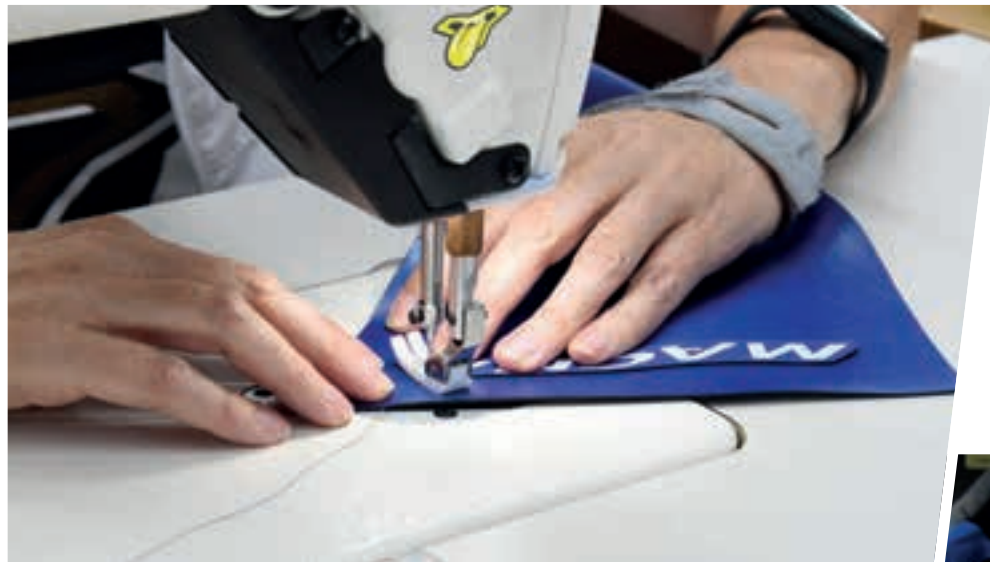

PRODUCTION

Next, the design of the suit is digitally translated to each individual panel, after which the cutting of the leather and liner can take place. After being cut into the right shape, the leather panels are punched with a machine to give it the right thickness. To ensure ventilation is present, certain panels are perforated before being put together.

The design will now be printed on the leather panels. Before being put aside to dry, all panels are treated with a protective film to make the suit and its design even more durable.

This is where the suit really starts to take shape. Now that the panels are ready, other parts such as Armax protectors are collected and the assembly of the suit can take place. This is not done by machine - okay, partly it is - but by the hands of a specialised tailor.

Before the suit leaves MVP, it first needs to pass Quality Control. Here, another specialist checks the suit on a number of criteria and will take action accordingly if needed. If all lights are green, the suit is shipped to its intended owner.

////////////////////////////////////

OFFICES **ITALY** and

In addition to our headoffice, we opened two additional offices to gain a greater foothold in the market. Our Italian office was officially opened in 2016. Equipped with a fully stocked dealer showroom and warehousing, we cover the Italian market from here.

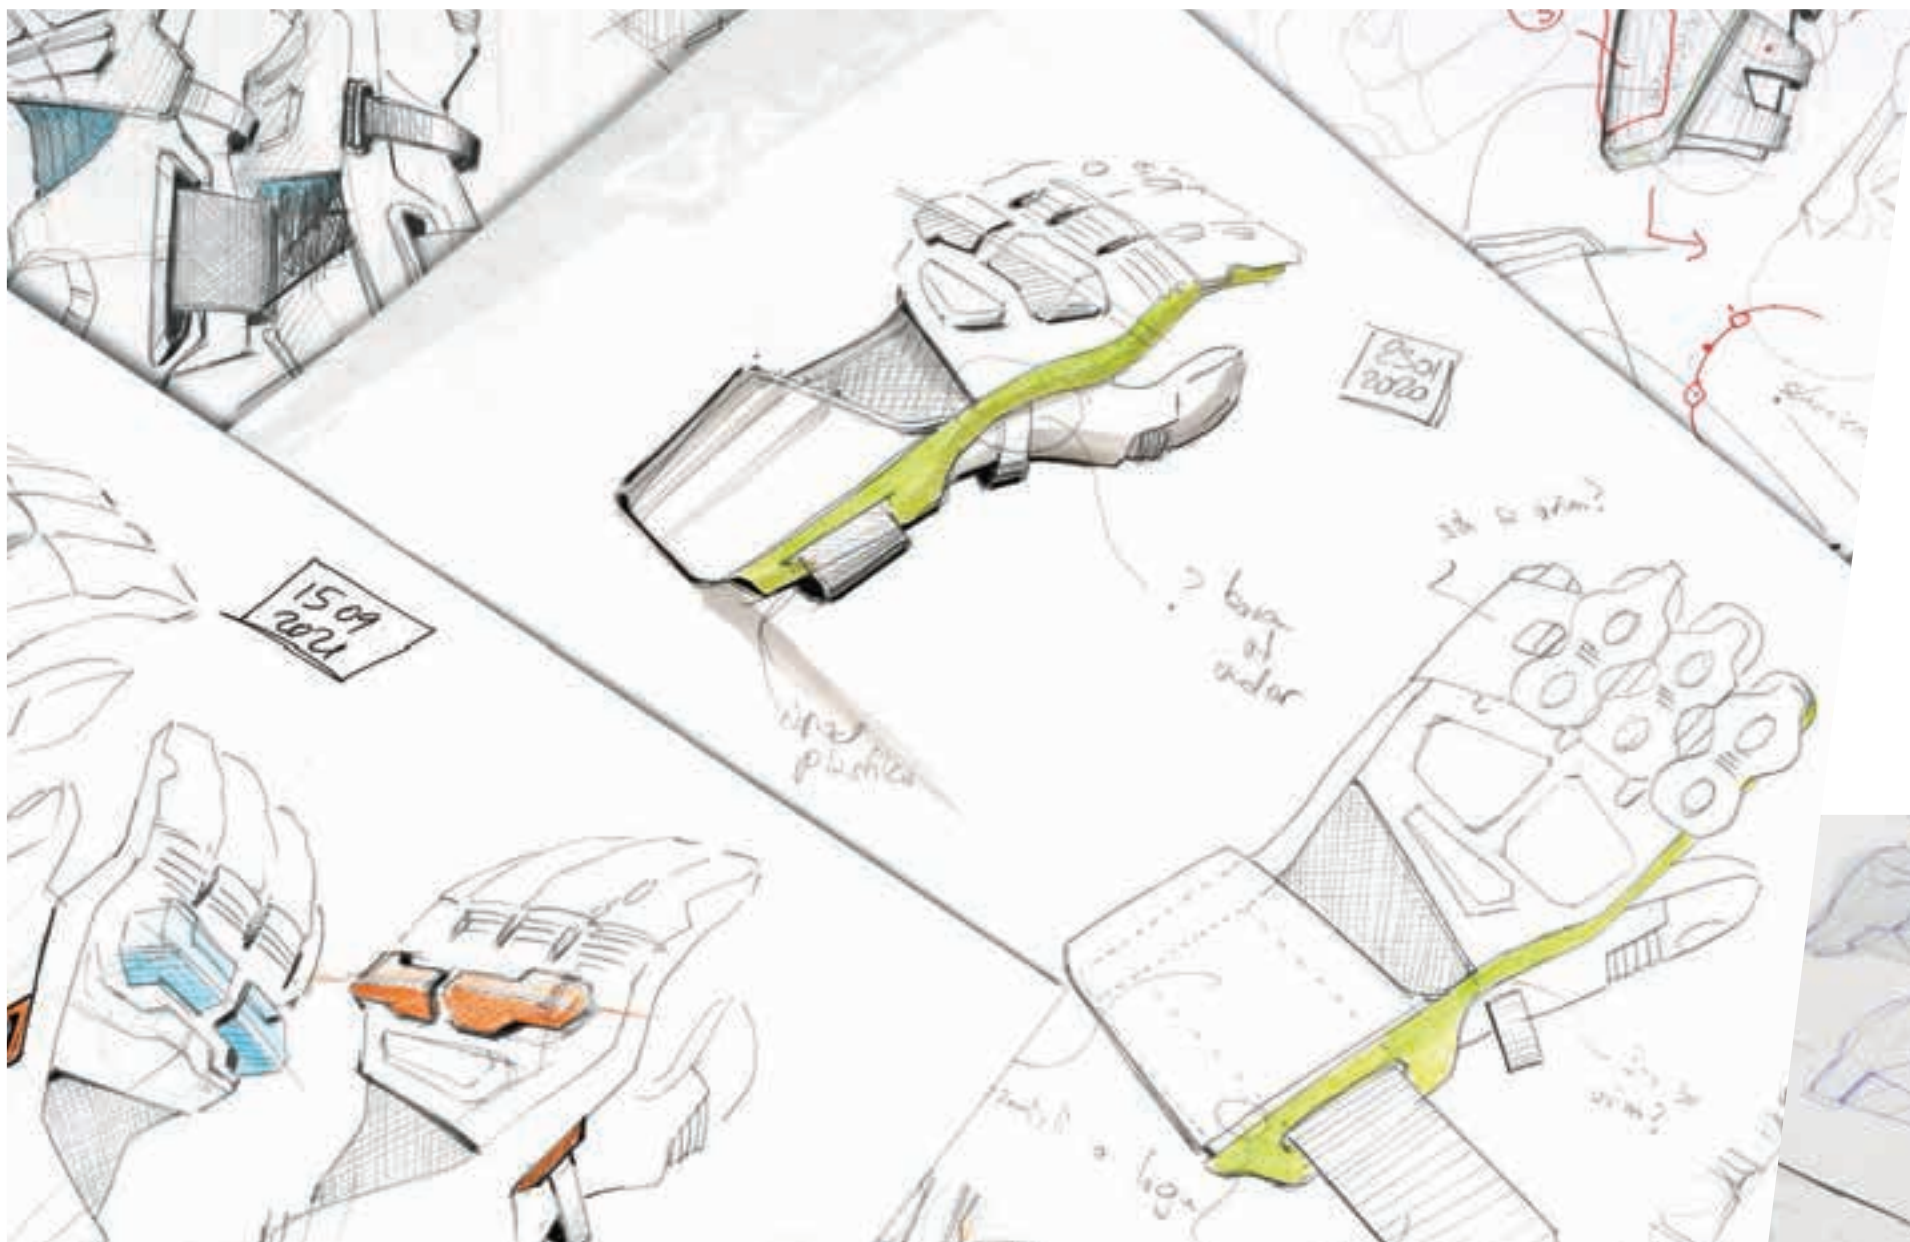

PORTUGAL

And why stop there? Two years later in 2018 we opened another office in Portugal, also equipped with a dealer showroom and warehousing. From this office we cover the entire markets for Portugal, Spain, and France.

THE DUTCH DESIGN PROCESS

Innovative, minimalistic, experimental and quirky at times; some of the terms used to describe Dutch Design aesthetics. The same words can be used to describe the design foundations at MACNA.

At the R&D department, our team of specialised designers is working like a well-oiled machine, creating new ways to improve your riding experience by blending fashion with technology.

Before a concept is finalised, many hours are spent on getting down to the essence of an idea or issue and developing that essence to its full potential. No surprise the entire design department is riddled with sketches, 3D prints, samples and fabric swatches.

2D, 3D, AND A BUNCH OF FABRIC

////////////////////////////////////

If the concept is worth pursuing, it will be digitally redrawn. But there's more to it than that: the drawing of a jacket is actually a multi-page manual. It encloses all the materials, panels and parts that will be used, along with manufacturing instructions and much more. A blueprint, if you will.

Then follows the sample stage: the first time seeing a creation in the flesh! But many times, the first sample looks far from the final product you'll see in the stores. It can have replacement parts, different colors, or different materials. But that's okay, as the first sample is subject to cutting and resewing, fitting and testing, and being drawn upon.

ATTENTION TO DETAIL

//////////
 All 3D parts are developed in-house, from buckles to knee sliders, from pullers to knuckle protectors and everything in between. After all, if it's visible, it has the right to look good. Was obsession for details also a part of Dutch Design? Or is it just us? Oh well...

TEST DUMMIES

Several times during the design process, we like to shut off our computers and leave the office for some real-world testing. It leads to new insights and improvements, but we also do it simply because love to ride.

After the final adjustments are made and all is said and done, production gets underway. This year's creations are on the pages ahead of you, so don't hesitate and turn this page to start your engine for a thrilling ride!

**WE GOT
YOUR BACK...**

You can't tame a great white shark, nor should you headbutt a bull or ask Italians if they like pineapple on their pizza. If it's an adrenaline spike you're searching for, there are safer ways to get your desired shot of dopamine.

We're not saying track riding is by definition any safer than putting pineapple on pizza, but we do guarantee we'll have your back when you're out on track.

Don't thank us, thank the MotoGP riders who ride with our latest creations and aid our tailors at the MACNA Vantage Point (MVP) in Molvena, Italy with development of prototypes into innovative gear.

That's what we call rapid innovation!

**... AT THE
TRACK**

Disclaimer: MACNA supports La Margherita and distances itself from ingredients other than the authentic ones.

TEAMWORK

The most experienced rider in our stables was born in San Giovanni Rotondo, Italy, on 5th July 1986. Michele Pirro started his career on 125cc bikes in 2003. During his four years in this class, his most notable achievement is his third-place ranking in 2005.

In 2010 and 2011 Pirro participated in the Moto2 championship, where he secured a pole position and two podiums, one of which was a victory. After only two years of competing in Moto2, the Italian made the step to MotoGP.

Of his thirteen years in MotoGP, Pirro spent most of his time on a Ducati, primarily testing and developing. He has 68 races under his belt and scored a total of 234 world championship points at the time of writing.

Aside from several Wildcards to participate in different events, Pirro can also be found competing in the Italian Superbike (CIV) series. He has ridden over 100 races, and has won over 70 races and multiple CIV championships.

Working together with (experienced) professional athletes such as Michele Pirro enables us to develop our gear based on their priceless feedback, resulting in innovative and high-quality gear for both track and road. Teamwork makes the dream work.

YOUNG TALENT

We support the youngest fanatics of the sport through the Race-Kids motorsports academy. Though made for the smallest sizes, the suits and gloves are far from immature: they are held to the same safety standards as the adult versions. This way, we can ensure a safe and fun introduction to the sport.

HALL OF HEROES

Since 2014, there have been so many different riders, suit designs and liveries, it's hard to keep track! See anybody familiar?

INSPECT, CLEAN, REPAIR

Balancing on the fine line of the limit often results in a one-way ticket to the gravel trap. It's the risk that comes with the sport. Main thing to worry about: is the rider ok? If so, then it's time to take another go and rush for the service center. Parked at the MotoGP paddock, the service trailer is the workplace of our racing support manager. Here, the suits can be serviced, and there's also a meeting/lounge room where riders can kick back and relax a little...

INTRODUCING TECH LAB

SPECS GUIDE

Let's have a look at what exactly has been made. Because as you know, our gear is loaded with specs! Whether it's something small, like a Zip Grip, or something more substantial, like Night Eye - it's all as important. Topics like protection and visibility get our full attention but we also spend a lot of time working on ways to make your ride as comfortable as possible, like our waterproof and heated gear. We're always looking at ways to improve your ride and try to make it look awesome as well!

SINCE 2021

ARMAX 

PROTECTION

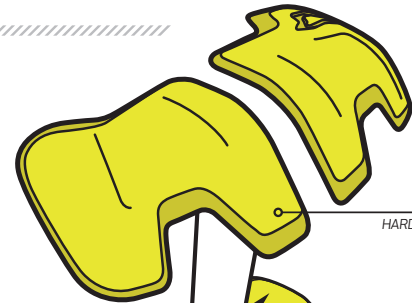

You've probably heard of the expression "a chain is only as strong as its weakest link." The same thing can be said of seams in a suit, as they're the weakest part of the construction.

That's why we searched for and found a way to increase safety by concealing the seams in one of the most important zones: the shoulder.

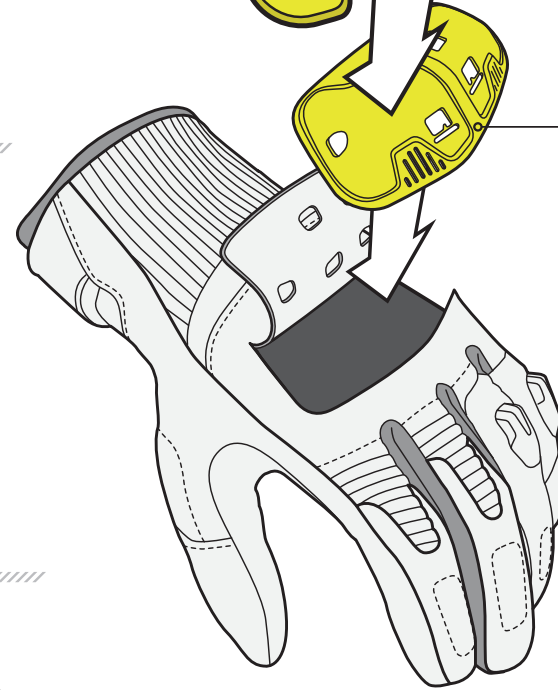

A tough, solid baseplate is placed underneath the fabric of the outer shell, out of which cut-outs are made. These small areas allow the abrasion-resistant cover to be fixed to the baseplate and strengthened by an adhesive solution.

ARMAX can also be found on gloves as we've managed to translate this innovative (and patented) construction to the knuckles, palm and even fingers.

R.I.S.C.

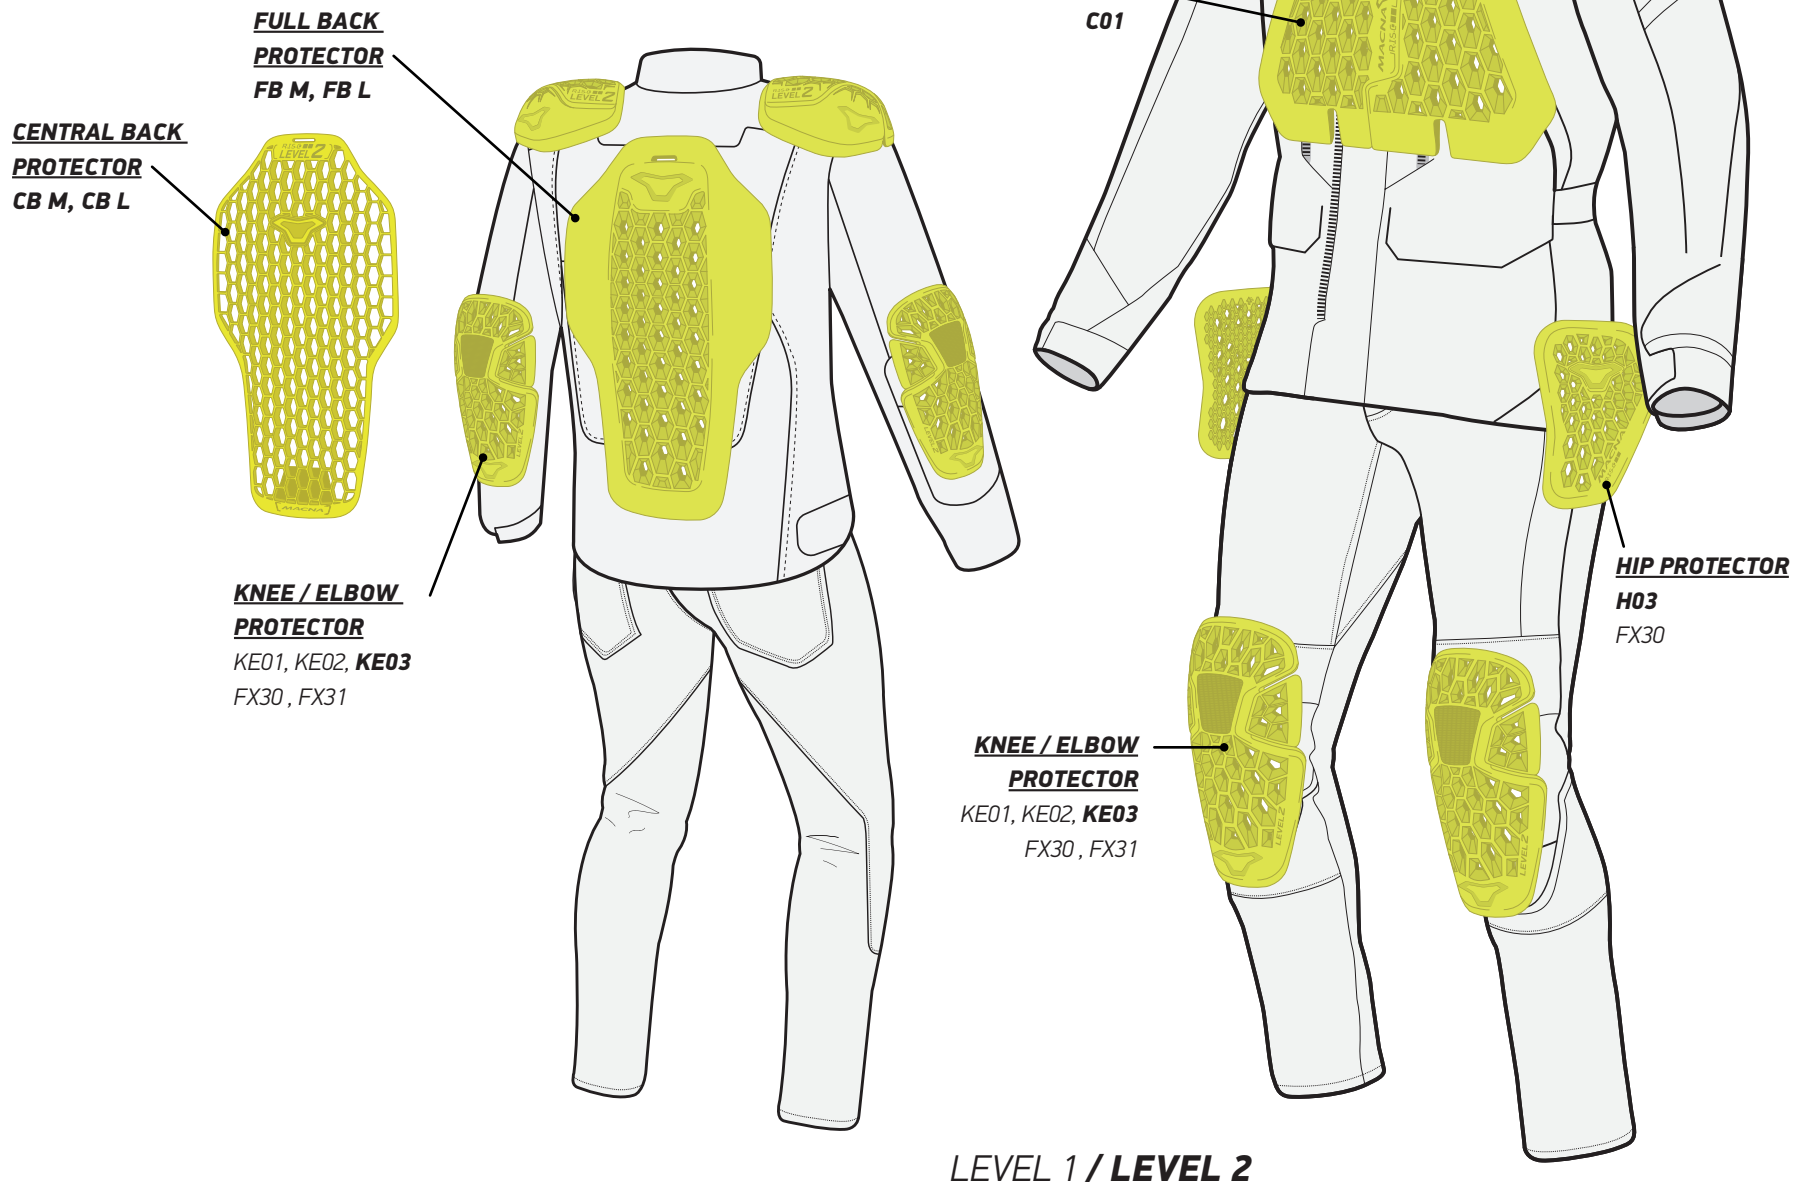

RIDERS IMPACT SAFETY CONCEPT

INTERIOR

Some time ago we developed new R.I.S.C. protectors with a hollowed-out, hexagonal structure that absorbs and distributes impact forces, keeps the protector breathable and looks incredibly good. (So good even, we've developed an exterior variant based on positive feedback!)

Our R.I.S.C. protectors are flexible, ergonomically shaped and present in all our gear of the past few years. Your knees (and optionally your hips) are well protected in our pants as goes for your shoulders and elbows when wearing a MACNA jacket.

A R.I.S.C. back protector (level 2) is separately available as is the only two-piece chest protector (level 1) on the market that locks itself automatically when zipping up. All other protectors are available in both level 1 and 2 and all R.I.S.C. protectors are odorised.

R.I.S.C.
FULL BACK SINCE 2020

Flexible and light weight protector that covers your entire back. The ergonomic design follows the flow of your back to give the ultimate support and achieve a comfortable yet highly protective ride. The material is designed to deliver outstanding impact protection, while the hexagonal structure offers ventilation and flexibility without compromising strength

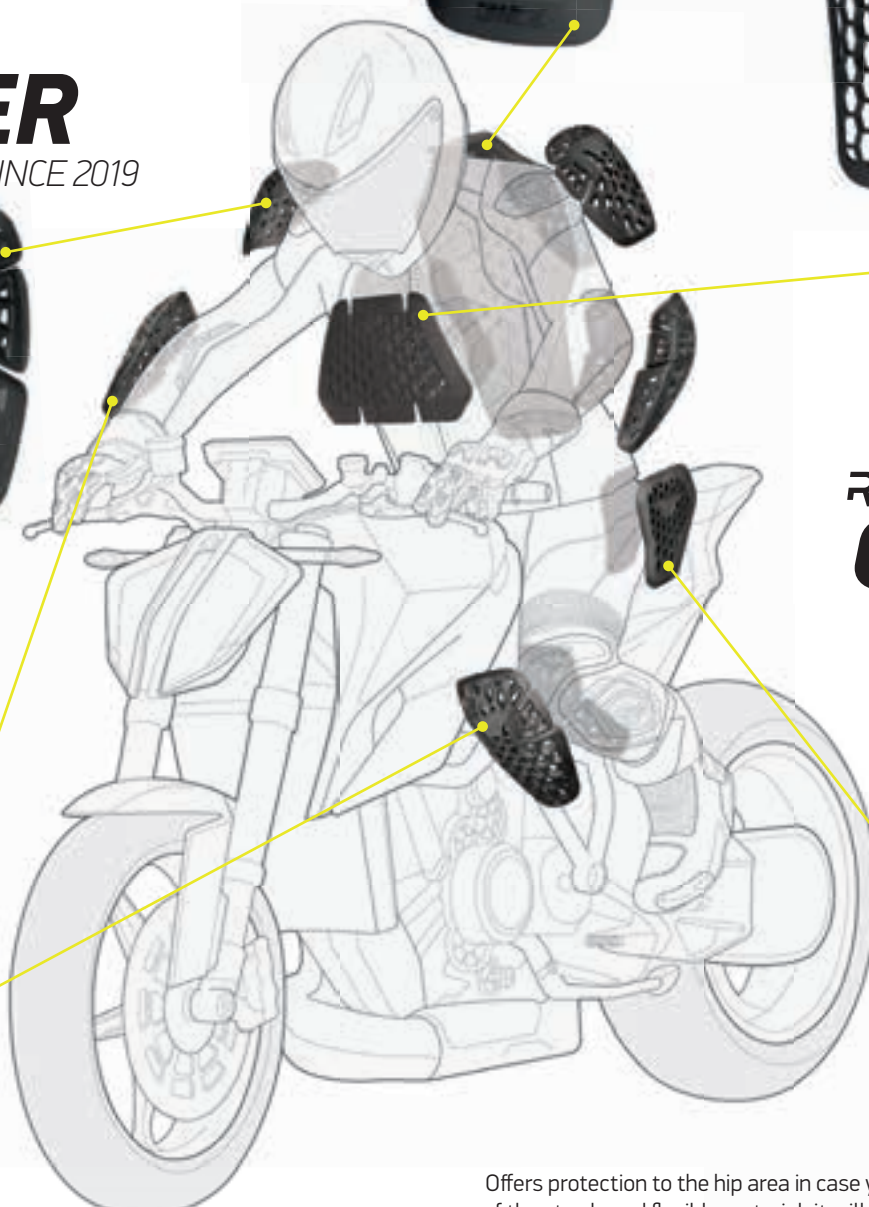

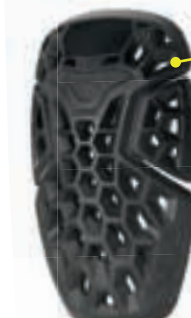

R.I.S.C.
CENTRAL BACK
SINCE 2025

R.I.S.C.
SHOULDER
SINCE 2019

These soft and flexible protectors add safety and durability by covering the seams on critical spots. They are fully ventilated and light weight to carry the weight of the world on your shoulders without even noticing it.

R.I.S.C.
CHEST SINCE 2021

These two parts join together to form one tough protector. Both parts are inserted in the pockets on either side of the main zipper, when the jacket closes, both sides of the protector will slide into each other. It's light weight, flexible and fully ventilated.

R.I.S.C.
KNEE / ELBOW
SINCE 2019

Soft and sturdy protector which covers your entire elbow in case you slide over the asphalt. The ergonomical design and the flexibility provide the ultimate comfort when you are riding.

R.I.S.C.
HIP
SINCE 2019

Offers protection to the hip area in case you decide to make a nasty slide. Because of the sturdy and flexible material, it will soften the impact of a fall and can be easily inserted into hip prepared pants. They're also fully ventilated for ultimate riding comfort.

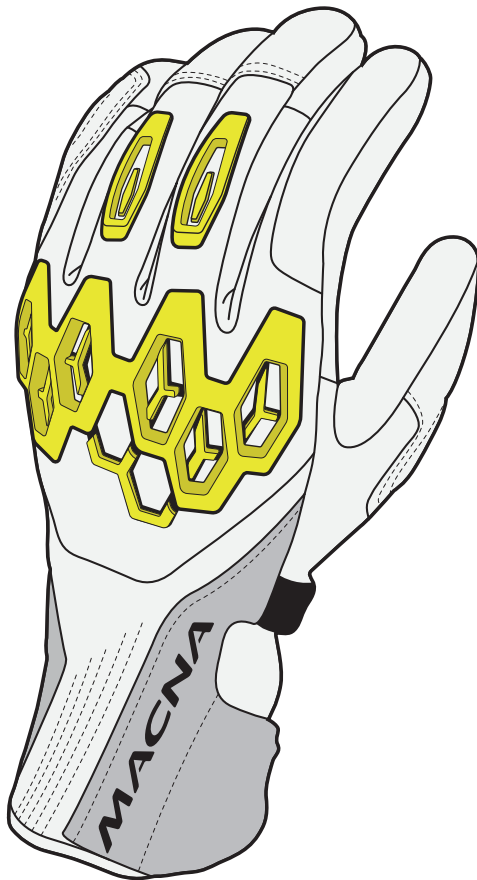

FX31

FX30

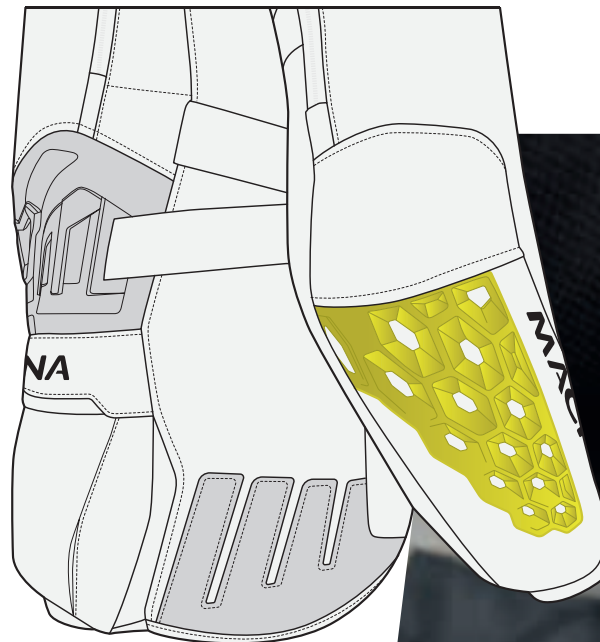

R.I.S.C. **FX** SINCE 2024

The thinnest and most flexible interior R.I.S.C.™ protector currently available. FX protection shapes itself to the shoulder, elbow, or knee to provide as much comfort as possible. Due to its flatness, it also aids the discreet look of jeans and cargo pants.

EXO R.I.S.C. SINCE 2022 **KNUCKLE**

EXO R.I.S.C. SINCE 2022 **ELBOW**

EXO R.I.S.C.

Some time ago we developed new R.I.S.C. protectors with a hollowed-out, hexagonal structure that absorbs and distributes impact forces, keeps the protector breathable and looks incredibly good.

Based on positive feedback about its looks and the ergonomic design, we've developed our interior protectors into an exterior variant.

EXO R.I.S.C. lets you enjoy on the outside what was already present on the inside. Basically, we created an extrovert twin brother of our protector, one that likes to flaunt its looks.

Like true twins, though, they share more than they differ; flexibility, breathability, safety and comfort.

TPU

R.I.S.C. TPU protection is thermoplastic polyurethane incorporated in the outer shell. Protection made of TPU can vary in hardness but has a (semi) hard feel to it in most cases.

TPU is characterised by many properties, including elasticity, transparency and resistance to oil, grease and abrasion.

Other advantages are its injectability similar to TPR and its low-temperature flexibility. It is mostly seen in black as it is less easily to colour than TPR.

TPU SHOULDER SINCE 2011

TPU KNEE SINCE 2017

First introduced in our MotoGP / WSBK suits, the knee protector has found its way into the consumer market through the Voltage suit. The dual density TPU material provides extra protection and abrasion resistance.

KNEE SLIDER SINCE 2013

A mix between good ergonomics, abrasion resistance and feeling with the tarmac. The TPU knee slider feels at home at the track (or at a nice twisty back road without too much traffic... we won't tell), and was developed with the feedback of the pros.

SINCE 2017

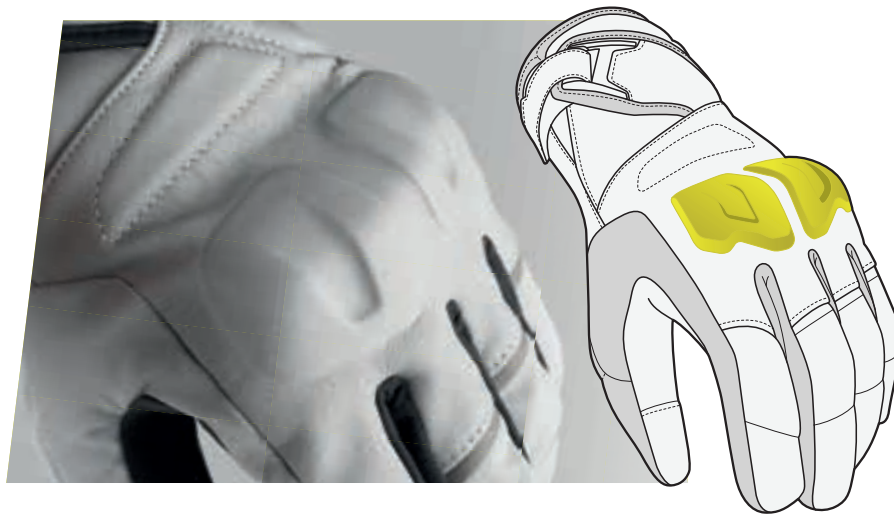

ELBOW SLIDER

A mix between good ergonomics, abrasion resistance and feeling with the tarmac.

TPU *SINCE 2009*
KNUCKLE

TPU *SINCE 2009*
PALM

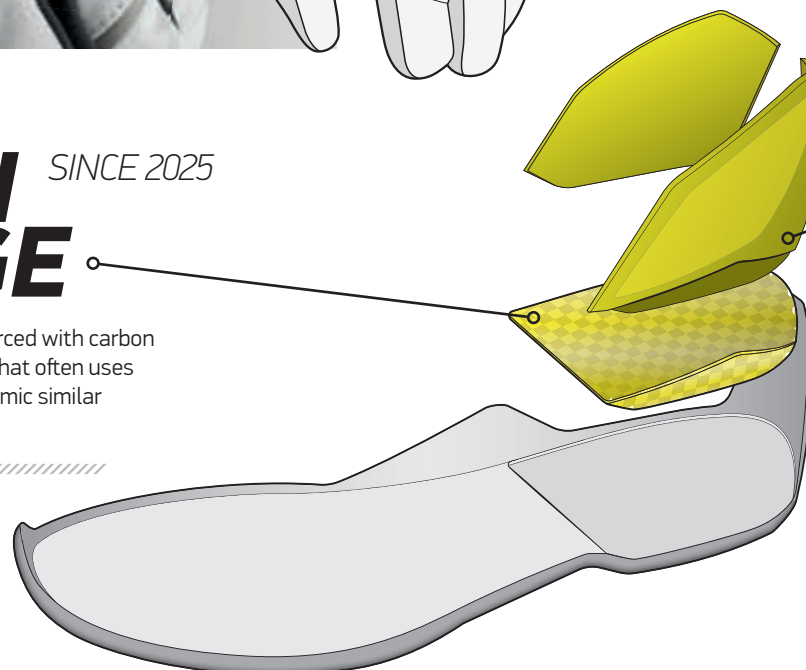

TPU *SINCE 2024*
GEMINI

Protection consisting of two parts that provides high flexibility in addition to impact absorption and abrasion resistance. Developed for critical areas that benefit from high mobility or dexterity, such as the knuckles.

CARBON BRIDGE *SINCE 2025*

The bridge of the shoe is uniquely reinforced with carbon fibres, opposed to traditional footwear that often uses TPF (thermoplastic frames) inserts to mimic similar protective properties.

TPU **COCKPIT**
SINCE 2025

The cockpit above the bridge is fully made of TPU. The cockpit provides additional stability and comfort, as well as protection of the ankle joint in case of a slide.

EVA

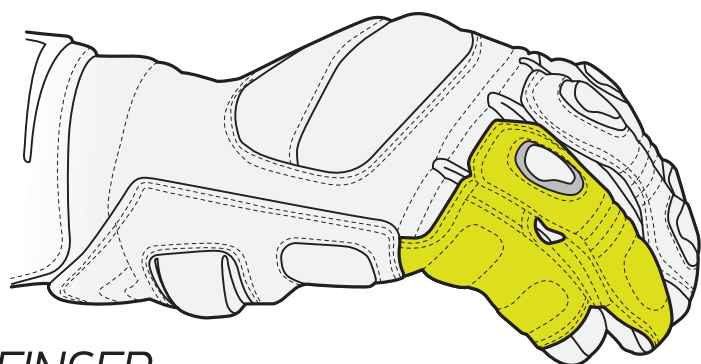

R.I.S.C. EVA protection consists of rubber foam underneath the outer shell. Protection with EVA padding is flexible and resilient as it recovers quickly from compression.

EVA foam excels in absorbing vibrations and impact forces. It is also characterised by its good thermal insulation as well as low water-absorption.

Other advantages are its softness, non-toxicity, stress-crack resistance and resistance to ultraviolet radiation which makes EVA suitable for many purposes.

EVA SINCE 2019 SHOULDER

FINGER SINCE 2016 BRIDGE

Extra reinforced leather bridge between the two outermost fingers of the hand that prevents the little finger from dislocating or worse in the event of a crash. Developed in collaboration with professional MotoGP athletes.

CONSTRUCTIONS

Your level of safety is largely determined by the construction and materials that are used in your gear. By analysing the gear of our MotoGP and WSBK riders after they've hit the tarmac, we aim to continuously improve both factors.

When it comes to constructions, impact areas and delicate body parts are always given extra attention. Take hand palms and little fingers for example. When you fall, you're likely to catch yourself by extending your hands in front of you; palms first towards the tarmac. Land on your little finger and you're even further from home.

That's where thicker leather, double layers and specs such as the Finger Bridge come in. Similar solutions are fitted in other areas of different garments to take your safety to the next level.

REINFORCED SINCE 2016 LITTLE FINGER

During a crash, the little finger is an exposed part of your hand, it is at risk of catching on to something as you slide. The little finger protection is a fixed leather connection between your pinky and ring finger, giving it extra strength and protection.

ERGO PINK SINCE 2019

The seam on the pinky finger is designed to prevent pressure points.

REINFORCING **SUPERFABRIC**

SINCE 2011

Superfabric is a highly abrasion resistant material. You can easily spot it: look for a dark layer of fabric, overlaid with countless little guard plates on top.

All those little shields are arranged in a way that allows flexibility without sacrificing performance. They are coated in a resin that is also used in the production of helmets and can withstand aggressive abrasion - and are also highly slash / rip resistant.

So all in all, an effective additional layer of protection on key areas. You'll find it in our gloves, jackets, pants, and even our MotoGP suits, where they cover critical seams.

HEAT SHIELD

SINCE 1999

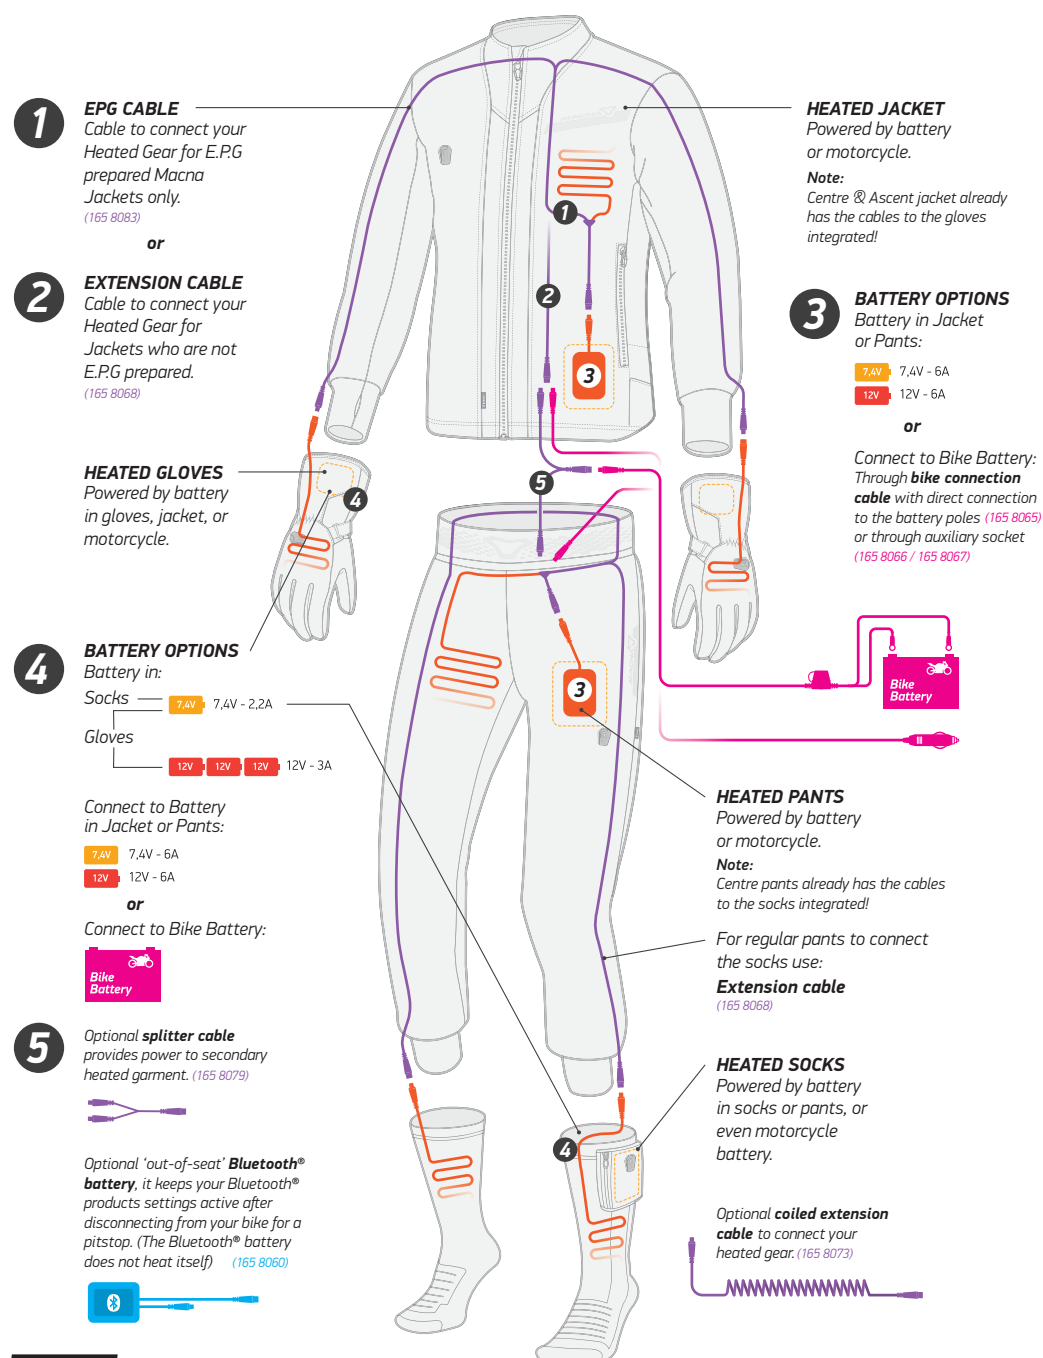

Heat-resistant material preventing a meltdown whenever your pants and exhaust accidentally meet each other.

COLD CONDITIONS

Not everyone pictures the same conditions when we talk about summer and winter. For this reason, we prefer to talk about cold, mild/rainy and warm conditions.

When talking about cold riding conditions, we refer to circumstances of 10° Celsius or lower according to the metric system or 50° Fahrenheit or lower if you're used to imperial.

Cold conditions make you crave one thing besides riding your bike; staying warm. In this section you'll find info about differentiators like Electric Power Guide and Padded Collar as well as complete info about our electrically heated gear and their accessories.

ELECTRICALLY HEATED

A fine network of thin heating wire on the inside which gives the extra heat where you usually lose it. Not only will it compensate the loss of warmth through wind chill, but it will warm up your hand as well. Depending on the amount of heat, up to 4 hours on a fully charged battery.

**BATTERY AND ACCESSORY

STEP 2 CHOOSE YOUR GARMENTS

JACKETS / PANTS / GLOVES / SOCKS

STEP 3 CHOOSE YOUR POWER SUPPLY

7,4V or 12V

12V batteries heat faster and reach higher temperatures compared to 7,4V. The higher the amperage of the battery, the longer it'll last before it needs a recharge.

STEP 4 ACCESSORIES

CABLES

BLUETOOTH BATTERY

HEATED (BLUETOOTH) GRIPS

STEP 5 INSTALLATION

HEATED APP

The MACNA Heated App lets you take full control over your e-heated gear. Connect your gear to your phone via Bluetooth® and you'll never have to search for tucked away power buttons every again.

BLUETOOTH BATTERY Bluetooth®

SINCE 2022

When you disconnect your heated gear from your bike battery to make a pitstop or to stretch your legs, your gear will lose its juice. Resulting in you having to re-activate all your gear when you're about to take off again.

This out-of-seat Bluetooth® battery will keep your settings active for a while after you have disconnected from your bike battery, kind of like a standby mode. So, when you re-connect to ride bike battery, you're instantly ready to ride again.

It's important to point out that this is not a separate battery but more like a backup save button.

7.4V 12
DUAL POWER

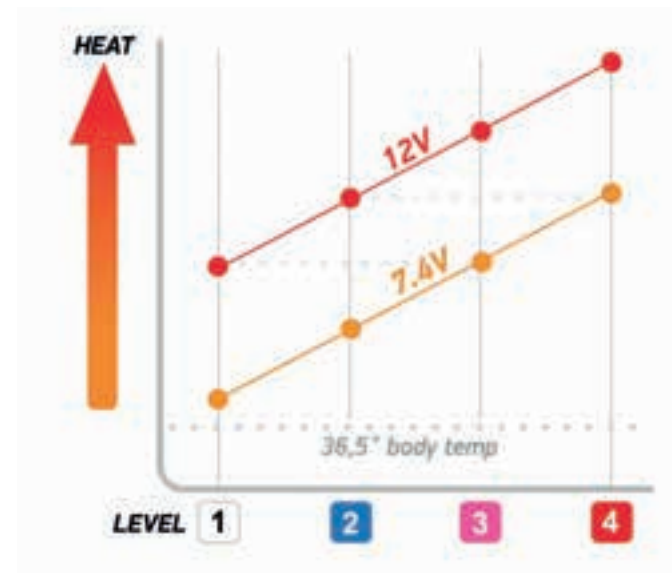

DUAL POWER

SINCE 2017

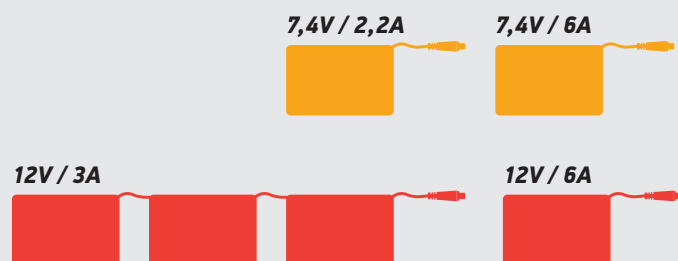

Imagine a drag race between a 700 cc and 1200 cc motorcycle; who do you think would win?

Aha! You already know more about heated gear than you think. Compared to a 7,4V power supply, a 12V power supply will heat up faster and reaches higher temperatures. Dual Power technology enables choice between a 7,4V or 12V power supply without making that choice permanent, as is the case with traditional heated gear.

Both voltages can be acquired in the form of a chargeable batteries with different amperes. Want 12V power and an endless power supply? Hook you gear up to your bike through cables!

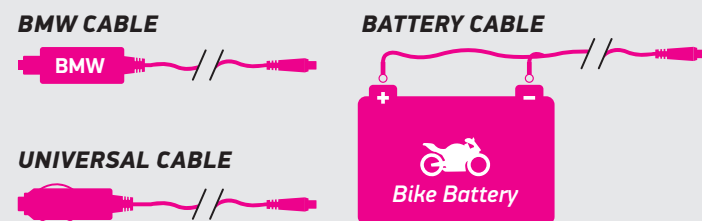

FREEDOM

OR

ENDLESS POWER

THE WORLDS FIRST HEATED GRIPS

SINCE 2024

WITH BLUETOOTH

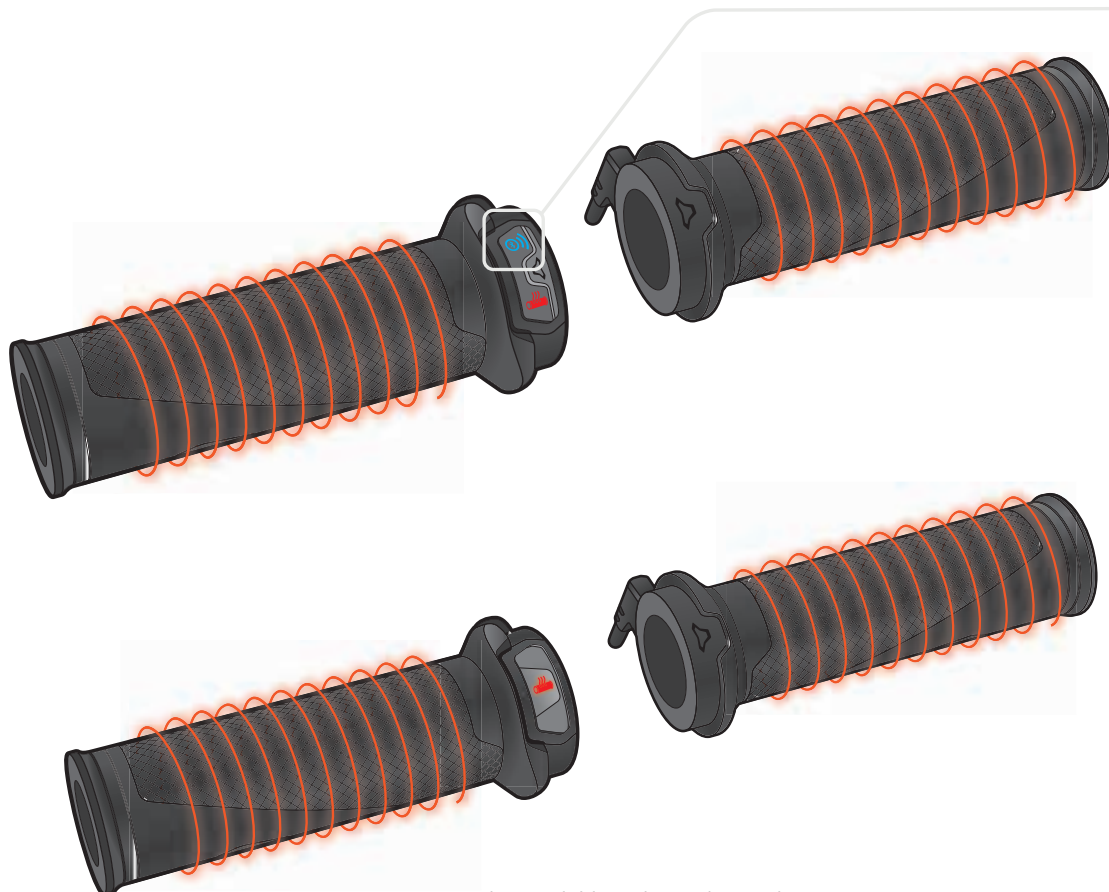

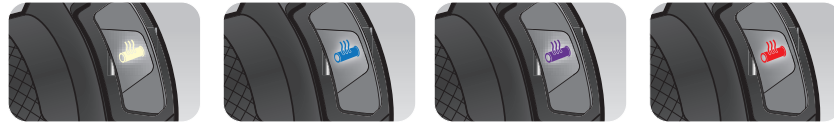

Our Bluetooth® Heated Grips are the first and currently only ones on the market that enable control over your heated MACNA® clothing straight from the handlebar.

Featuring grip texture for improved grip, a weatherproof unbody design, and four heating levels - just like our heated gear.

The heated grips are suitable for 22mm handlebars (left: 22mm, right: 25,4mm) and are cut to length, being 125, 120, or 116mm. They have an open end to enable handguards or bar weights to be mounted.

Our heated grips are also available without Bluetooth® for riders who just want to prevent their hands from freezing.

40% intensity 60% intensity 80% intensity 100% intensity

Also available without Bluetooth

 **Bluetooth®**

POWER CONTROLLER SINCE 2017

Still too cold or are you running a little hot? All our heated gear is fitted with a control button to select one of four different stages of heat intensity. With the press of a button, you can easily change the intensity while riding.

40% intensity

60% intensity

80% intensity

100% intensity

BLUETOOTH CONNECTIVITY

SINCE 2020

ONE APP TO CONTROL THEM ALL

Mobile Control: manage your settings, group products, set timers, see battery status and much more, all on your phone via Bluetooth. Not only for gloves - it's especially handy when wearing stuff like the heated base layers, where the physical control button is easily tucked away.

DOWNLOAD THE MACNA HEATED APP

Free downloadable app that enables full control over heated garments that are connected to your phone by Bluetooth®. Manage settings, group products, and adjust heating levels with the flick of a wrist.

To stimulate users to expand their heated ecosystem, the app sends push notifications about other MACNA® heated garments, and informs about the possibilities to connect them and use only one power supply.

Bluetooth®

ELECTRIC POWER GUIDE

SINCE 2020

Electric Power Guide is a series of loops inside a MACNA motorcycle jacket that enable the separately available E.P.G. cable to be run on the outside of the removable thermal liner to power your gloves, offering full freedom of movement and no bulk at the wrists.

EPG  ELECTRIC POWER GUIDE

HEAT UP!

We offer 3 ways to power your heated gloves:

- 1) Battery in cuff
- 2) Battery in jacket (via EPG*)
- 3) Motorcycle battery (via EPG*)

BATTERY AND ACCESSORY OPTIONS > PAGE 199

THERMAX JACKET

SINCE 2023

A Thermax™ jacket is a separately wearable, electrically heated jacket on the inside of your motorcycle jacket. Power this heated inner jacket through a battery or a direct connection to your motorcycle. Can also be connected to our other e-heated gear.

**ALSO WEARABLE AS
STAND ALONE**

SINCE 2024

GRIP PLUG™

An angled plug with two notches at the top and bottom, found in our e-heated gear. Developed to minimise defects and simultaneously increase usability.

PADDED COLLAR SINCE 2023

Extra high and extra padded - comfortable is an understatement. It's like having a pillow or cushion around your neck without actually having to jam one of those things in there.

WARM CONDITIONS

Not everyone pictures the same conditions when we talk about summer and winter. For this reason, we prefer to talk about cold, mild/rainy and warm conditions.

When talking about warm riding conditions, we refer to circumstances of 25° Celsius or higher according to the metric system or 75° Fahrenheit or higher if you're used to imperial.

Warm conditions make cooling down one of your main priorities. In this section you'll find info about differentiators like Air Scoop and Summer Comfort System as well as complete products such as our different cooling vests.

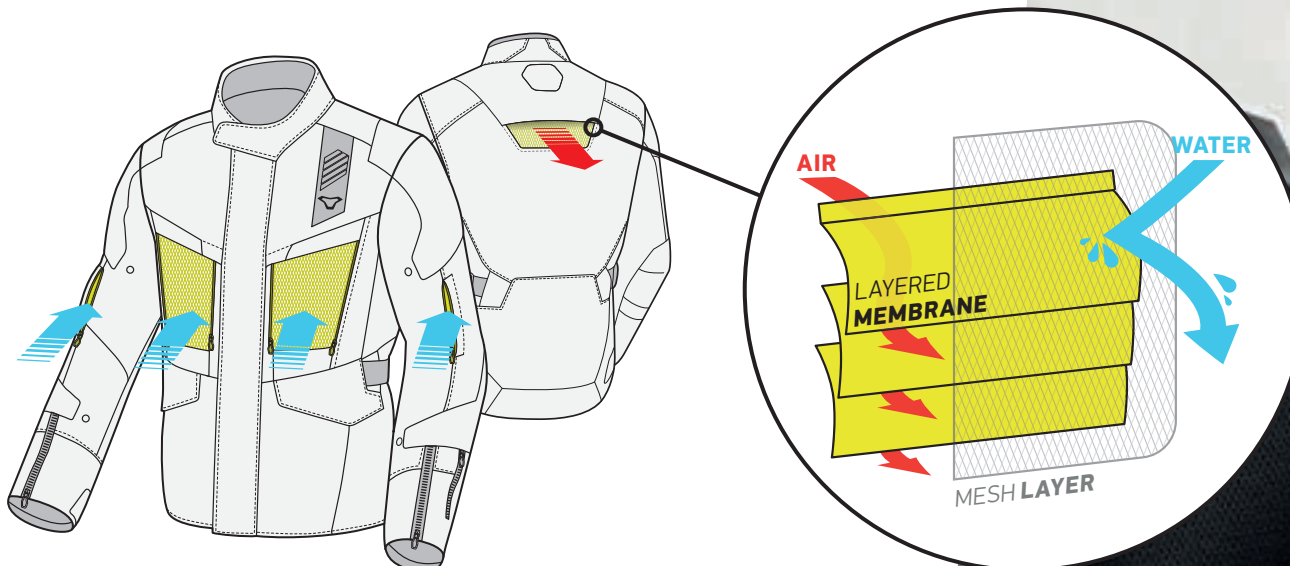

INTAIR

Hard-shell ventilation that is neatly incorporated into the garment, providing an increased intake of air to cool the body.

AIR SCOOP SINCE 2012

It's important to stay cool on a hot summer day, but sometimes an air zipper just won't do the job. The Air Scoop is a unique layered construction in the membrane that allows air to pass through the membrane without sacrificing waterproofness.

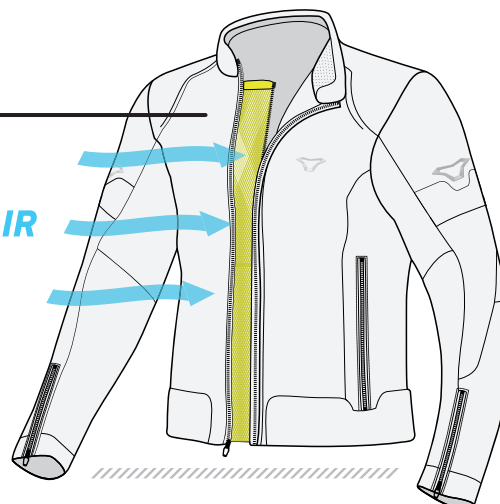

SINCE 2006

SUMMER COMFORT PRO

This construction of the motorcycle jacket features a detachable panel at the centre front, which turns the jacket into a semi-mesh one after being detached. Provides additional comfort in warm conditions.

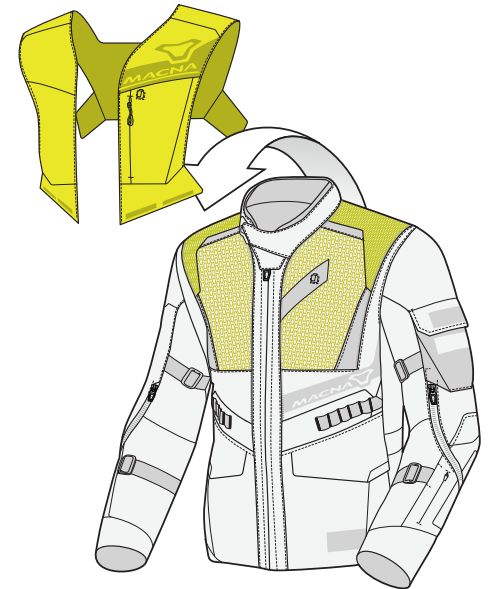

COOL AIR

SUMMER COMFORT SYSTEM

SINCE 2006

Instead of having a panel that can be unzipped completely, the Lite variant features just one zipper. It can be attached in two different ways; one of which reveals a long strip of mesh.

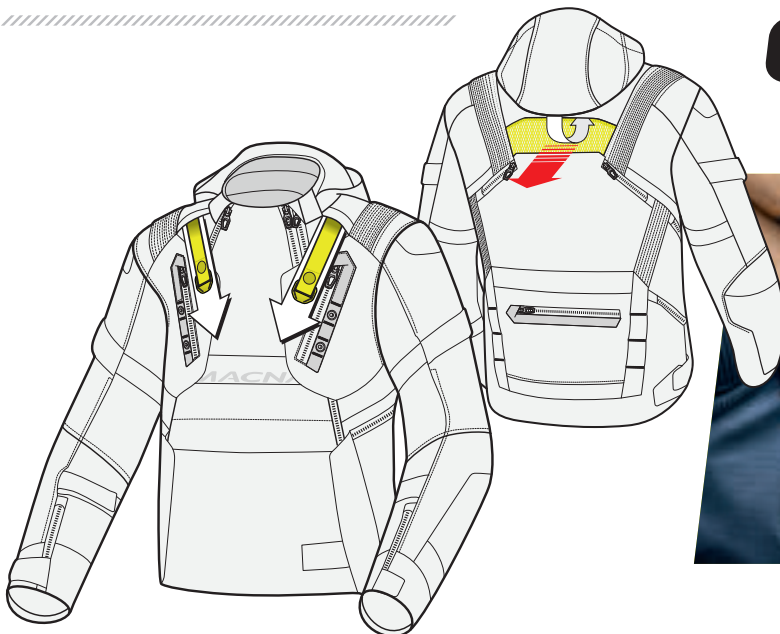

SUMMER COMFORT *SINCE 2025* FLEX

This construction of the motorcycle jacket features a detachable panel at the chest area that prevents overheating and provides additional comfort in warm conditions. The detachable panel can also be turned around to alter the look of the jacket.

QUICK VENT *SINCE 2024*

A large ventilation panel at front or back of the jacket that's quickly opened by pulling a pair of cords at the front. It can be compared to Venetian blinds you sometimes find in houses.

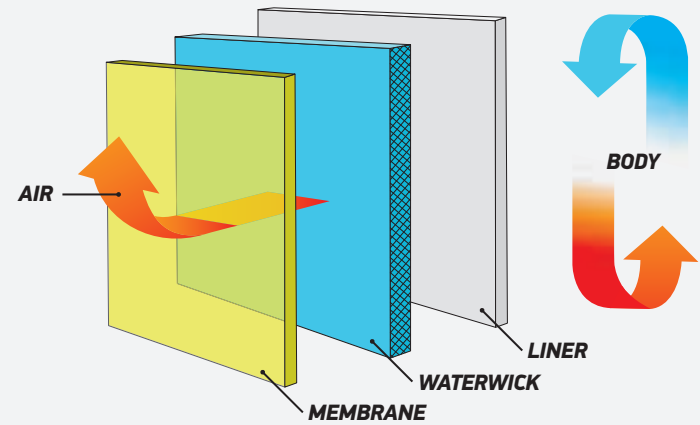

COOLING

COLD AS ICE

Cooling vests have been around for a while and have proven themselves during the hot summer days! They not only provide extra comfort, but also reduce the risk of heat stress, fatigue and loss of concentration.

THE PRINCIPLE

The heat from body and surrounding air make the water inside the vest vaporise. It causes the surface and your skin to cool down in a dry way before you become sweaty.

EVO

DRY COOLING VEST

SINCE 2011

Conventional cooling vests need to be worn wet, but the Macna Dry Cooling Vest Evo is an exception that will keep you dry! But how is that possible? Well, the vest has a 600ml reservoir which needs to be filled with (tap) water. When you put on the vest, the heat from your body and surrounding air make the water inside the vest vaporise. It causes the surface and your skin to cool down in a dry way before you become sweaty.

Depending on the temperature and humidity, a 600ml fill can last up to 3 days. Preferably use the vest in combination with a blow-through jacket, this ensures a maximum cooling effect.

RAINY CONDITIONS

Not everyone pictures the same conditions when we talk about summer and winter. For this reason, we prefer to talk about cold, mild/rainy and warm conditions.

When talking about mild or rainy riding conditions, we refer to circumstances between 10° and 25° Celsius according to the metric system or 50° and 75° Fahrenheit if you're used to imperial.

Mild or rainy conditions let you focus primarily on battling the rain. In this section you'll find info about differentiators like Water Exhaust and Screen Cleaner as well as complete info about all variations of Raintex membranes.

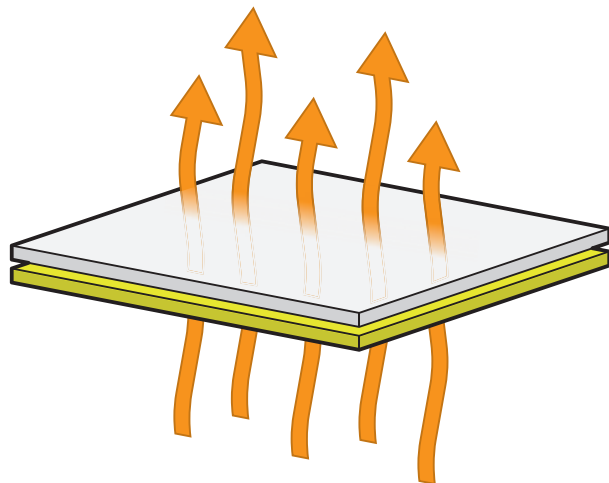

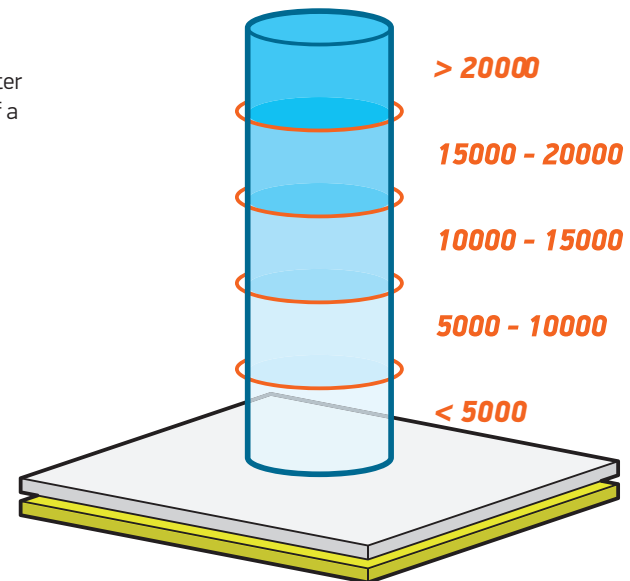

IMPERMEABILITY & BREATHABILITY

IMPERMEABILITY PERFORMANCE

A fabric's impermeability level is tested with the Schmerber water column test. The water column test measures the water pressure a fabric is able to withstand before it starts to penetrate the fabric. One Schmerber is equal to one millimetre of a water column and equal to 0,1 mbar of pressure. The higher the number, the more impermeable the fabric is.

A normal rain shower rarely exceeds 2000 Schmerber, but when you're riding your bike through the rain at 130 km/h, it can increase the water pressure on your clothes up to 8000 Schmerber. That's why it's important that our motorcycling equipment reaches high levels of performance.

SCHMERBER: IMPERMEABILITY LEVEL	
< 5 000	Some resistance to moisture
5 000 -10 000	Rainproof and waterproof under light pressure
10 000 - 15 000	Rainproof and waterproof under medium pressure
15 000 - 20 000	Rainproof and waterproof under high pressure
> 20 000	Rainproof and waterproof under very high pressure

BREATHABILITY PERFORMANCE

A fabric's breathability rate is tested with the MVTR index ("Moisture Vapour Transmission Rate"). The MVTR measures the amount of water vapour (in grams) that a square meter of material lets through in 24 hours ($g/m^2/24h$), to show the breathability performance.

The higher the result, the more breathable the fabric.

MVTR: BREATHABILITY LEVEL	
< 5 000	Not very breathable
5 000 -10 000	Suitable for low-output activities and general outdoor use
10 000 - 20 000	Ideal for more active use in high-output activities
> 20 000	The best for more intense activities or for use in warmer climates

MACNA'S

IMPERMEABILITY & BREATHABILITY

	SCHMERBER IMPERMEABILITY LEVEL	MVTR BREATHABILITY LEVEL
RTX DL	26 000	20 000
RTX ML	26 000	20 000
RTX+	26 000	15 000
RTX WATERPROOF	15 000	15 000

RTX DL

Raintex Direct Laminated

The breathable waterproof Raintex layer is laminated directly to the outer shell, leaving no space to trap water in between these two layers. Because only the outer shell gets wet, the jacket will dry faster and breathability remains intact.

RTX ML

Raintex Mesh Laminated

The breathable waterproof Raintex layer is laminated to a mesh fabric, ensuring we keep the maximum breathability. The mesh feels soft on the skin, providing comfort, movement and a little flexibility.

RTX+

Raintex Plus

Similar to our Raintex fabric but with a little more flex to it. Giving you more movement and comfort without having to compromise on impermeability or breathability.

RTX WATERPROOF

Raintex

A waterproof layer that will keep you dry, even at very high water pressures, but still breathable so internal water vapors can escape without much effort.

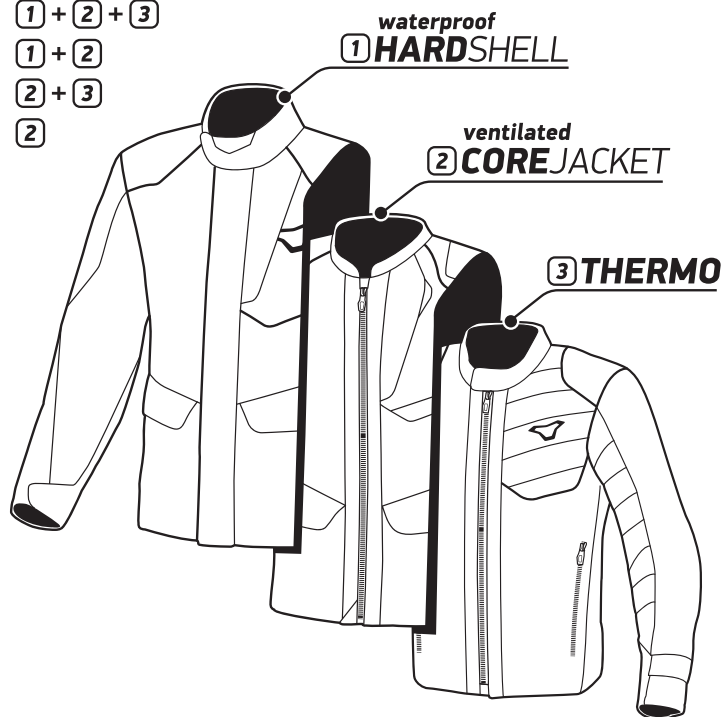

TWIN SHELL

SINCE 2007

Unlike a Jack of all Trades, Twin Shell consists of two fully developed jackets, each suited for their own riding conditions. Enjoy the warmth in highly ventilating mesh or brave the cold in a directly laminated ripstop jacket.

LAYERING OPTIONS:

- ① + ② + ③
- ① + ②
- ② + ③
- ②

HDry

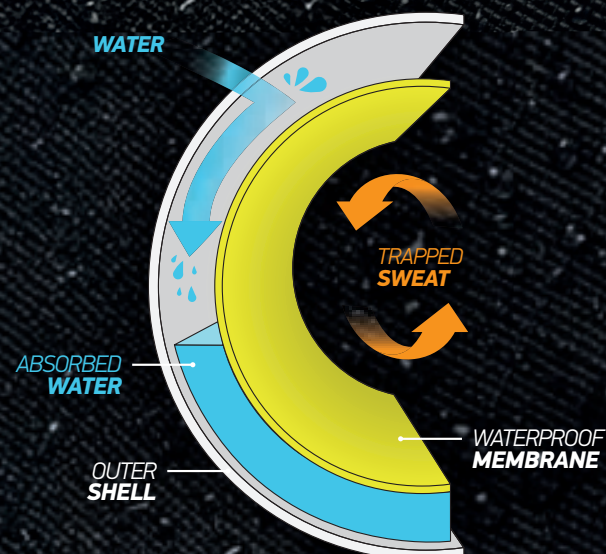

HDry waterproof breathable membrane is directly laminated to the inner side of the boots shell by a patented 3D lamination process: the external boot shell layer and the membrane are one, with no space inbetween.

Rain, snow and wind are blocked on the boots outer surface and a large volume of dry air keeps your feet warm and comfortable.

The ultra-thin waterproof HDry membrane and unique lamination process provide a seamless and tapeless result which will increase dexterity and create a precise fit, limiting the need to take your boots off.

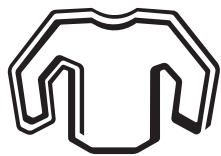

With the HDry 'direct lamination' process of the membrane eliminates all drawbacks associated with traditional "free-hanging" boot inserts, where water can penetrate in the gap inbetween the shell and the membrane.

CONVENTIONAL MEMBRANE

HDRY LAMINATE

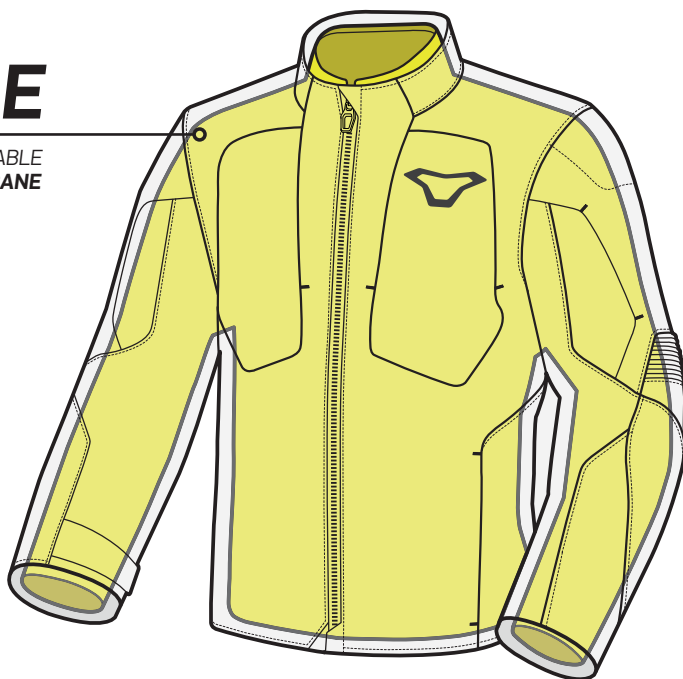

IN2OUT

SINCE 2023

On the inside, this jacket is equipped with our IN2OUT jacket. This waterproof membrane can be taken out and worn over the outer shell as a rain coat to prevent the jacket from getting dirty, wet and soggy.

INSIDE

WEAR IT AS DETACHABLE INSULATED MEMBRANE

OUTSIDE

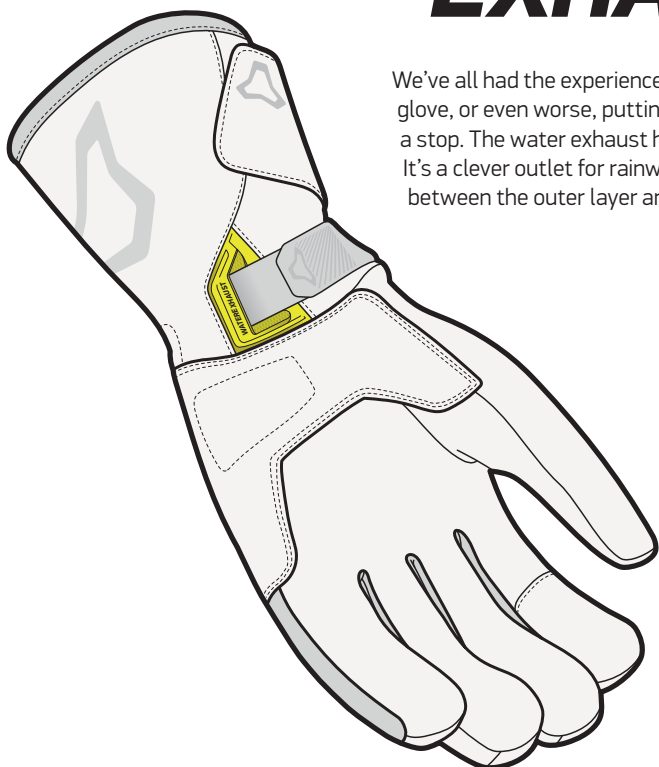

WEAR IT AS RAIN SHELL OR STAND ALONE JACKET

WATER EXHAUST

SINCE 2009

We've all had the experience of driving around with a wet glove, or even worse, putting on that cold, wet glove after a stop. The water exhaust helps to keep your hands dry. It's a clever outlet for rainwater, so it can't accumulate between the outer layer and waterproof membrane.

WATER EXHAUST 2.0

SINCE 2023

Version 2.0 works just as well but is much better looking as it's incorporated in the construction of the wrist strap.

Finally a proper substitute for zippers whenever 100% waterproofness is needed. It has no conventional zipper teeth and even seals an opening in a direct laminated jacket.

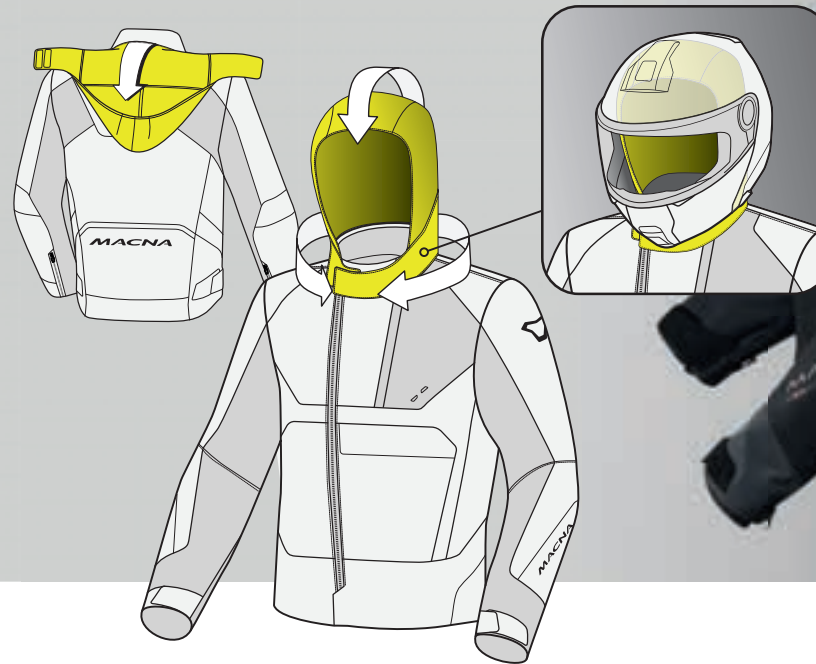

ZIPPER AQUA STOP

SINCE 2014

STORM HOOD

SINCE 2024

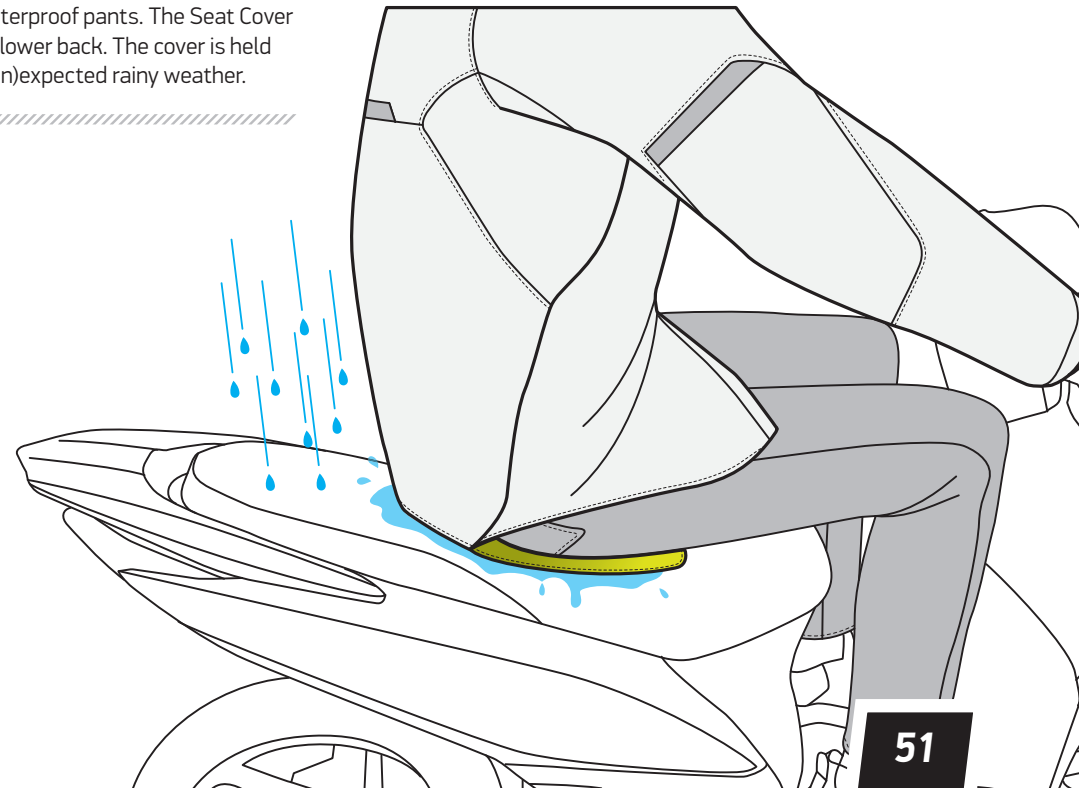

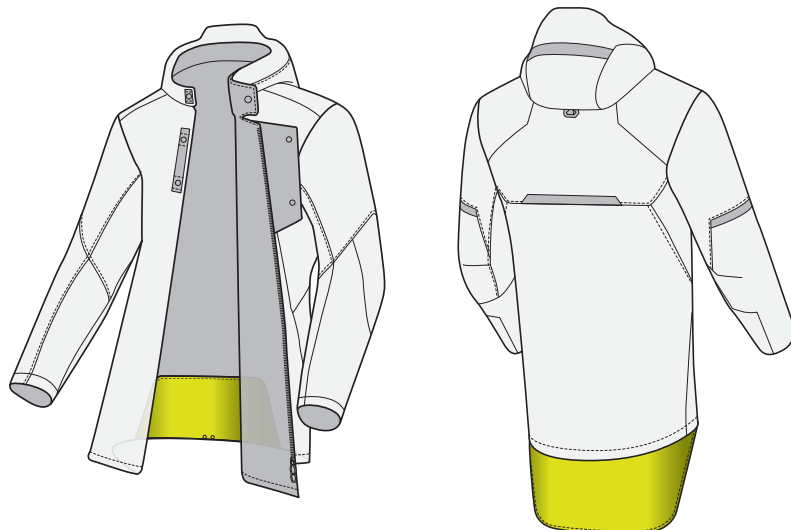

A deployable hood that's worn underneath the helmet and lets you create a fully waterproof connection between your helmet and jacket. Prevents water from entering the neck via the collar.

SEAT COVER

SINCE 2023

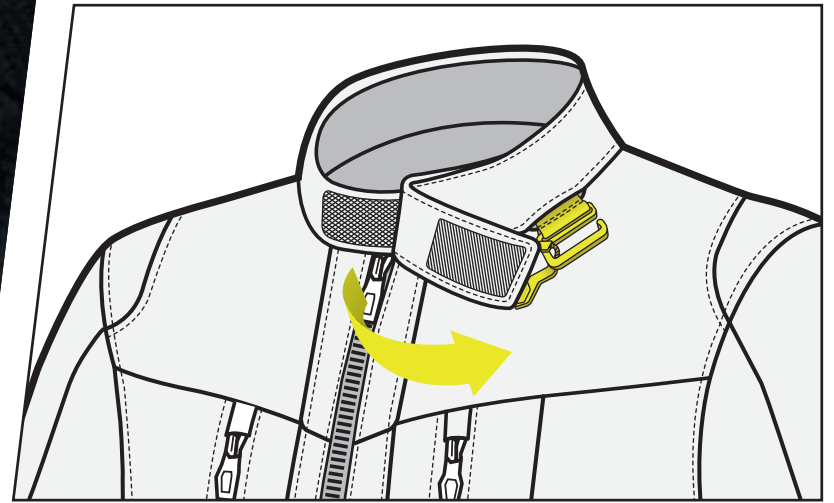

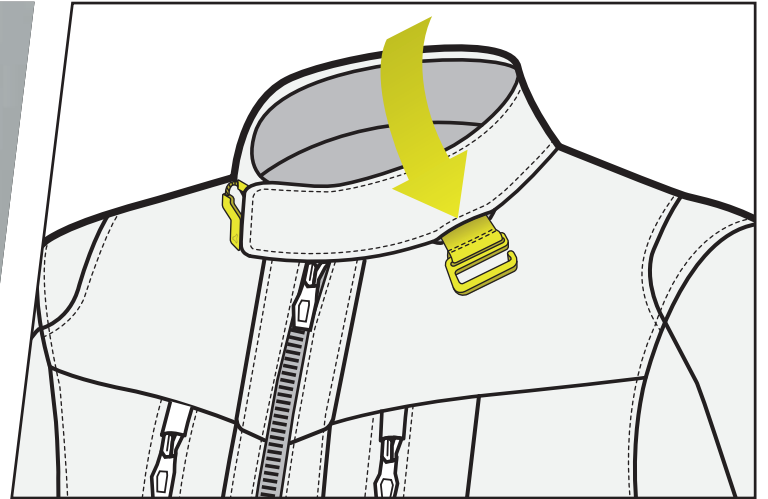

This one's for all you urban riders out there without waterproof pants. The Seat Cover is a seat cover hidden on the inside of the jacket at the lower back. The cover is held in place by a zip and can easily be deployed in case of (un)expected rainy weather.

COLLAR LOOP

Keep your collar to the side with the collar loop. The collar tip at the end of the collar can be easily attached to a hidden hook inside the collar, to keep your collar in place.

SINCE 2022

DYNA CUFF

SINCE 2018

Softer, more dynamic cuff enables the sleeve to retract and adjust itself to the length of the wearer's arm. Great for riders who have short arms in relation to their bodies.

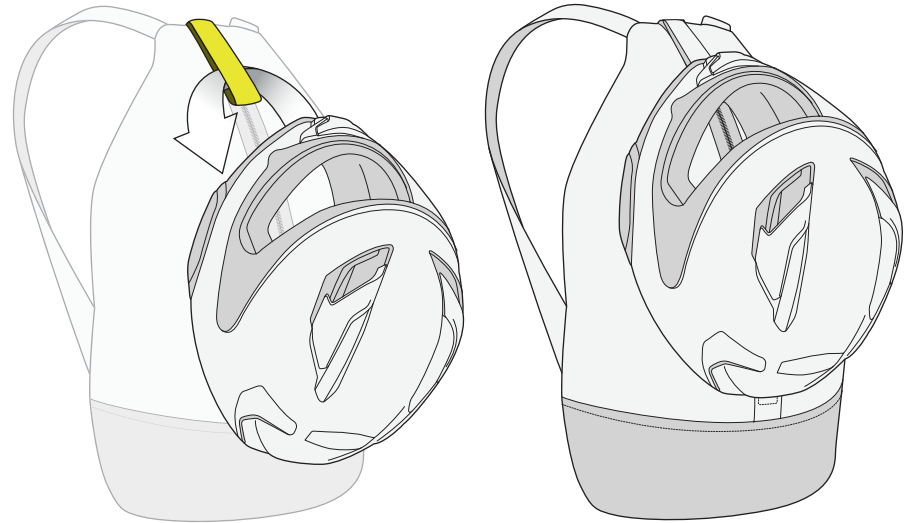

HELMET LOOP

SINCE 2024

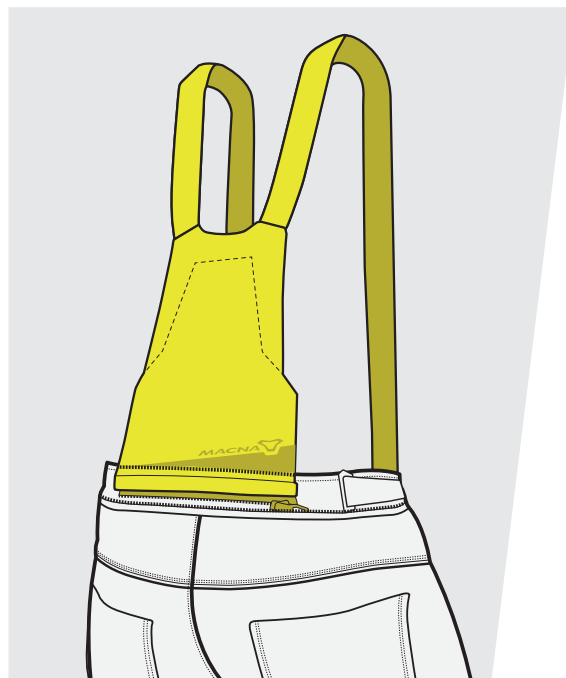

Loop inside a Confold™ jacket that can carry a helmet when the jacket is converted into a backpack.

PREPARED FOR SUSPENDERS

SINCE 2008

Suspender prepared pants feature two hooks on the front to easily attach the optional suspender kit, the back of the suspender kit can be connected to the connection zipper.

USABILITY

Making your motorised life more enjoyable; that's our mission. Unfortunately, that doesn't mean we'll be waiting for you at gas stations to fill up your tank for free. Instead, we spend tons of hours developing innovative specs that prevent or solve complaints and increase your enjoyment in other ways.

Imagine no more loose, floating layers in your jacket. Zipping up in a split-second without having to insert multiple times. Operating touch screens without taking your gloves off or getting rid of that flapping hood by fixing it at the back or zipping it off completely.

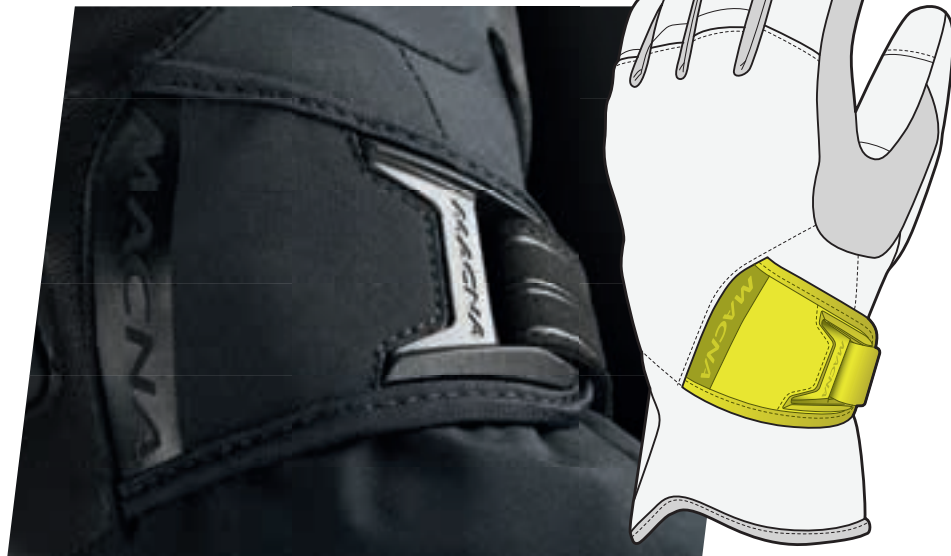

In this section you'll find differentiators that make your life easier - regardless of your riding conditions - and info about the way in which it increases your enjoyment at the handlebars.

30° BRACE

SINCE 2022

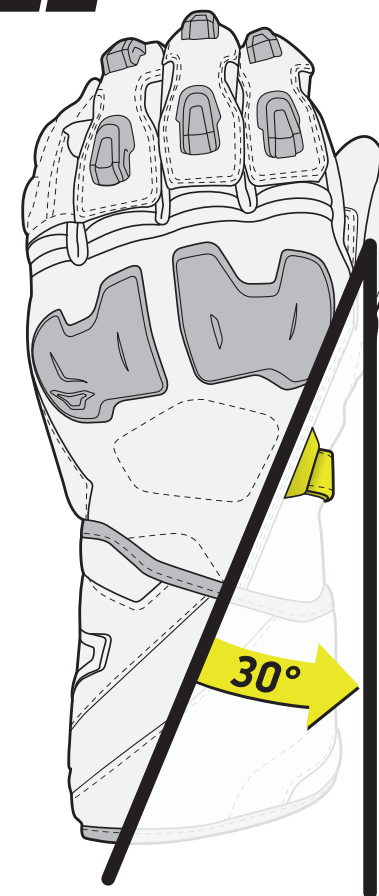

The reinforced brother of our 30° Buckle™ has been refined to further perfect its functionality. The brace of the wrist strap is placed under an ergonomic angle of 30 degrees, providing optimal freedom of movement.

30° BUCKLE

SINCE 2007

The buckle of the wrist strap is placed at an ergonomically optimized angle of 30 degrees, so the wrist can move freely.

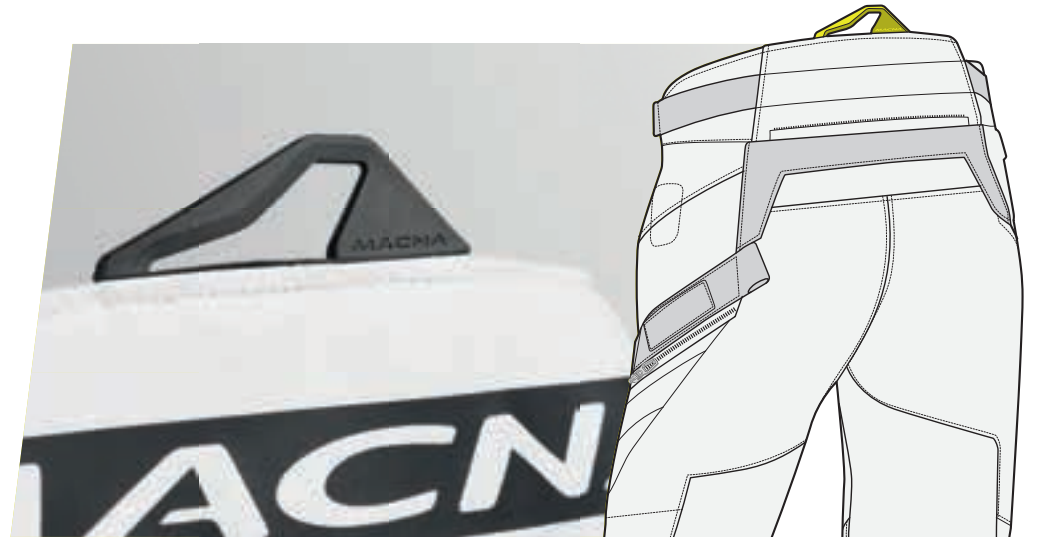

BELT LOOP

SINCE 2008

A simple but effective way to fix your jacket to your jeans. The loop in the inside of the jacket can be easily fixed to the belt of your jeans.

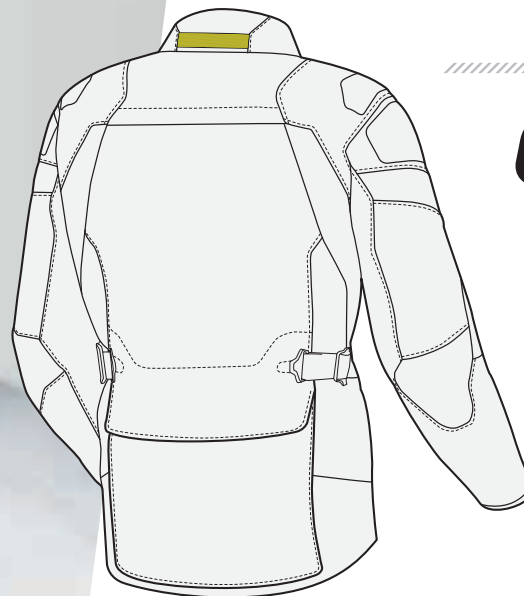

PANTS HANGER

COAT HANGER

SINCE 2007

Hang in there with a durable coat hanger that's designed to hold the weight of a motorcycle jacket. No more ripped hanging loop inside your jacket.

CONFOLD

SINCE 2024

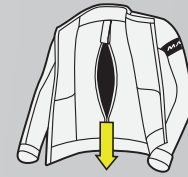

REVOLUTIONARY PATENT

Patented construction of a jacket that enables it to be converted into a backpack so it doesn't have to be carried by hand after parking. The backpack provides enough space for a helmet, gloves, and more.

EASY CUFF

CONVENTIONAL

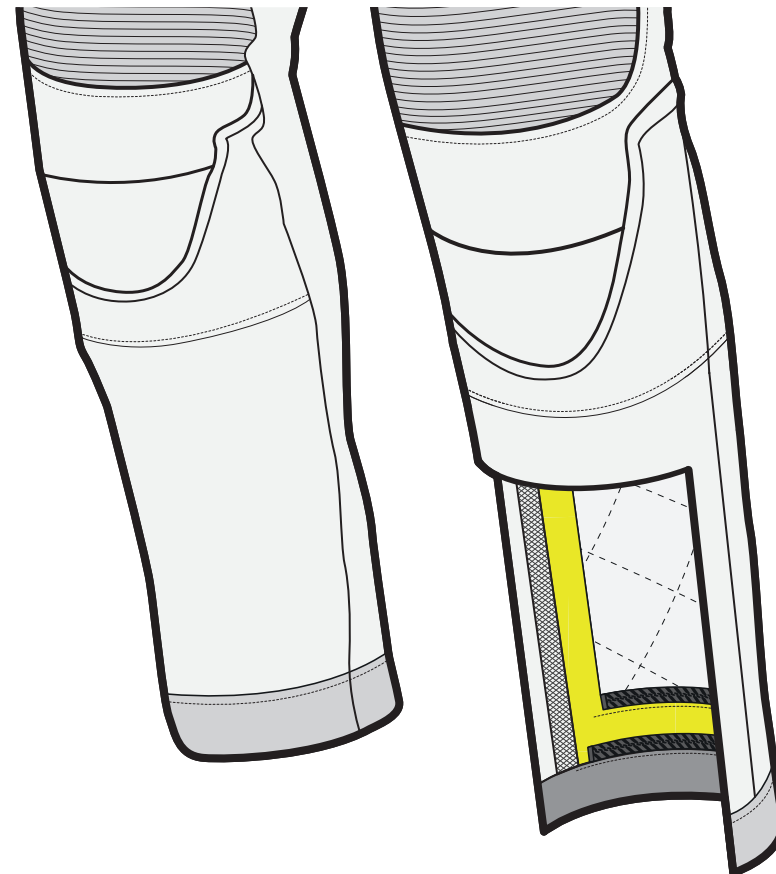

EASY CUFF *SINCE 2009*

Loose layers in your sleeve are just a big pain in the ass!... or arm? But fortunately, the Easy Cuff creates a nice and tidy sleeve. Waterproof up to the rim, and easy to access whenever you're quickly changing the jackets setup. The removable membrane is attached to the outer shell on the inside of the sleeve opening, making it easier to access. Connected by small zippers, this means no more annoying loops and snaps pressing into your arms skin. Get rid of the mess in your sleeve hooking to your watch and switch to Easy Cuff!

EASY CUFF PANTS *SINCE 2009*

No hooks and loose layers stuck to your boots or hooked to your feet when taking off your pants. The connection between detachable membrane and outer shell is placed on the inside at the bottom of the trouser leg, cleanly tucked away with a zipper. The zipper is easily accessible and will not interfere with your feet or boots. Because the membrane is fixed completely at the bottom, the pants are waterproof all the way to the bottom of the leg.

FLOATING COLLAR

SINCE 2010

Annoying scratchy collars are a thing of the past, the stretchy material around the collar prevents pressure points around the neck.

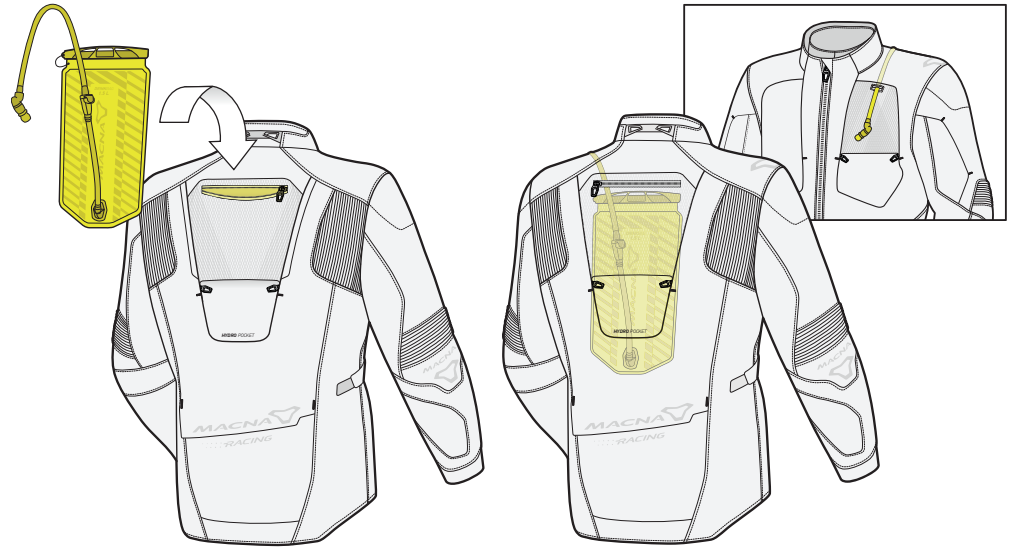

HOODIE HOLDER

SINCE 2014

Are you tired of being slapped around by your own hoodie? Luckily, we have introduced the hoodie holder to hold your hoodie in place, so it won't flap around in the wind.

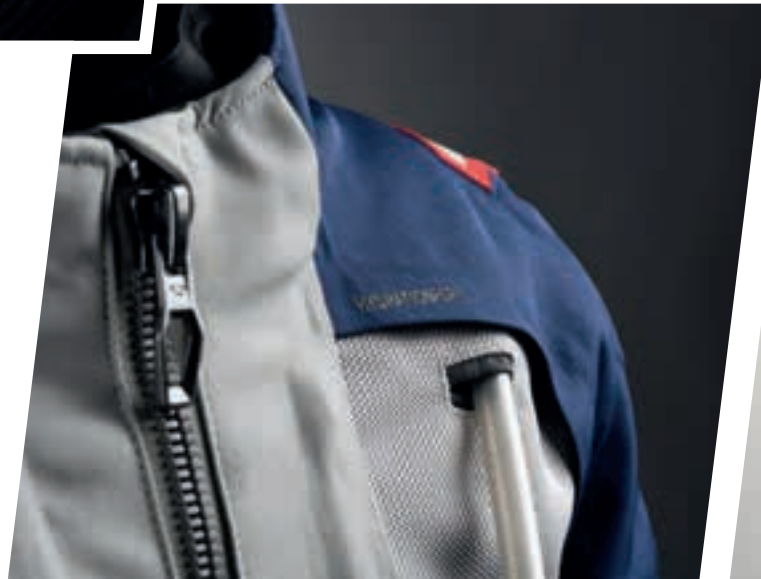

HYDRO POCKET

SINCE 2022

////////////////////////////////////
 The Hydro Pocket is a compartment prepared for a hydration bladder. The hydration pipe can be lead over the shoulder so that the nozzle can be positioned perfectly.

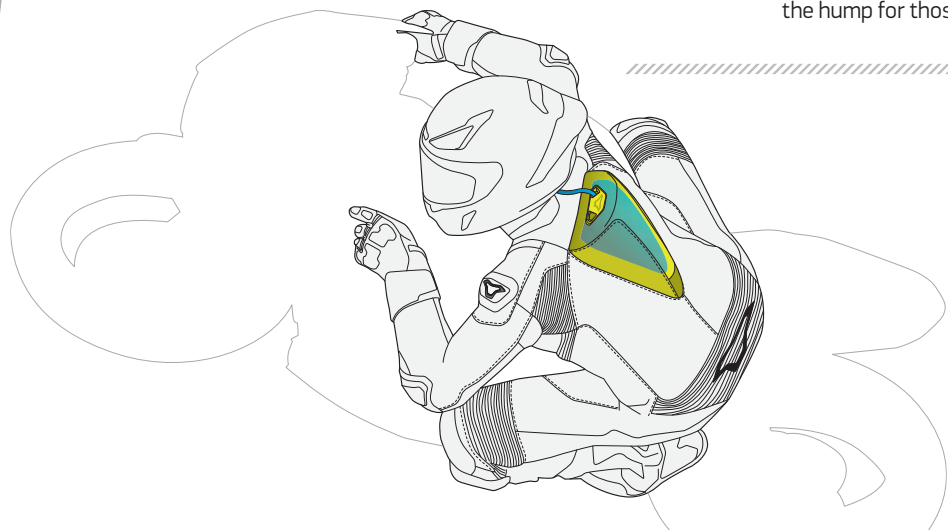

HYDRATION PORT

SINCE 2014

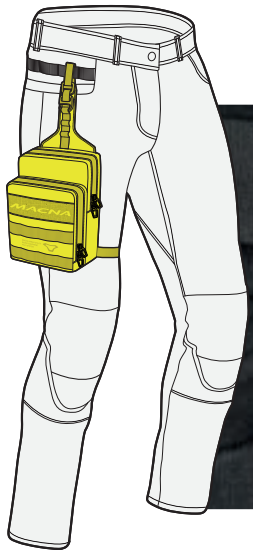

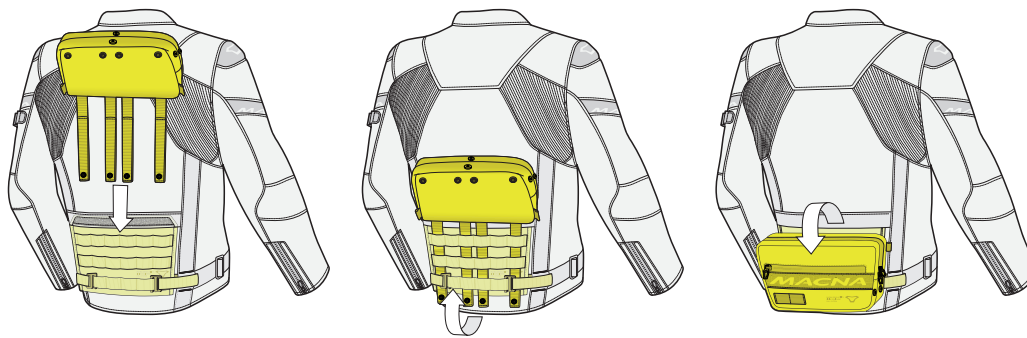

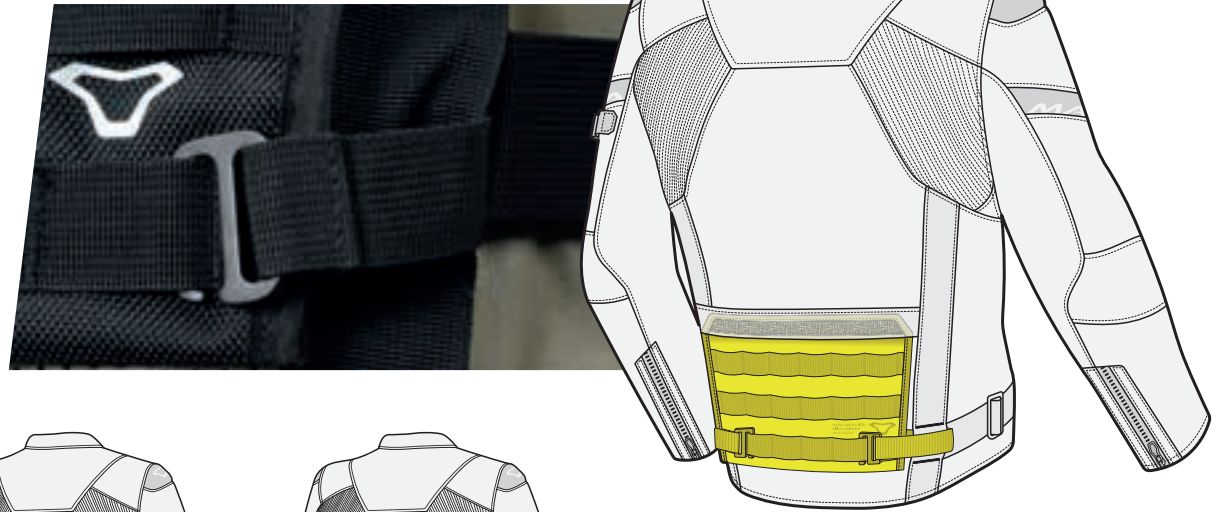

You can store a hydration bag in the hump for those hot trackdays.

////////////////////////////////////

P.A.L.S. SINCE 2023

The Pouch Attachment Ladder System is a grid of webbing used to attach smaller equipment onto load-bearing platforms such as backpacks and jackets. The webbing is 25 mm wide with 38 mm spacing between each sewing point lengthwise.

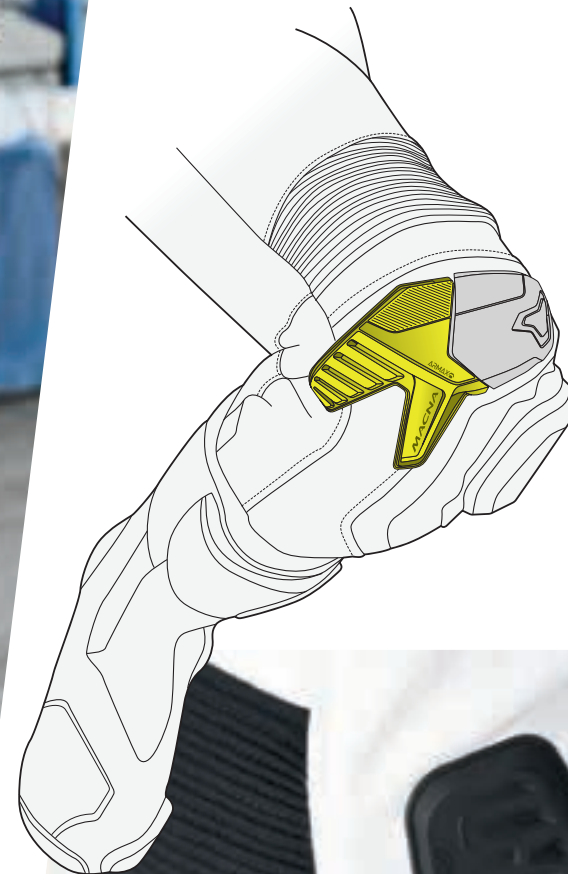

TPR KNEE GRIPS

SINCE 2023

Grip pads at the inside of the knees enable you to grab hold of your tank when engaging corners. The grips are made of TPR, sturdy enough to provide grip yet soft enough to prevent scratches to your tank.

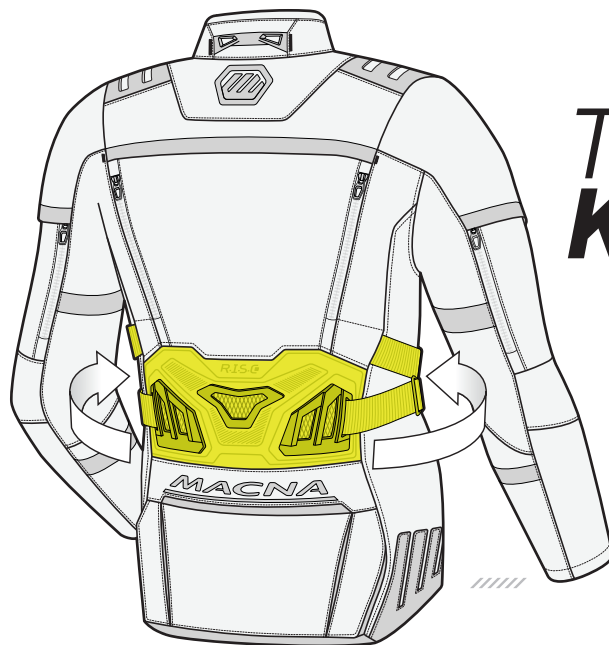

TOUCH TIP

SINCE 2010

An extra layer of conductive fabric on the index finger allows you to control touch-screen devices without having to take off your gloves.

TPR KIDNEY BELT

SINCE 2023

The kidney belt is incorporated in the outer shell. The TPR reinforcements are sturdy yet flexible enough not to get in the way of your comfort. Finished off with 3D mesh and padding in the surrounding area.

QUICK ACCESS PULLER

SINCE 2023

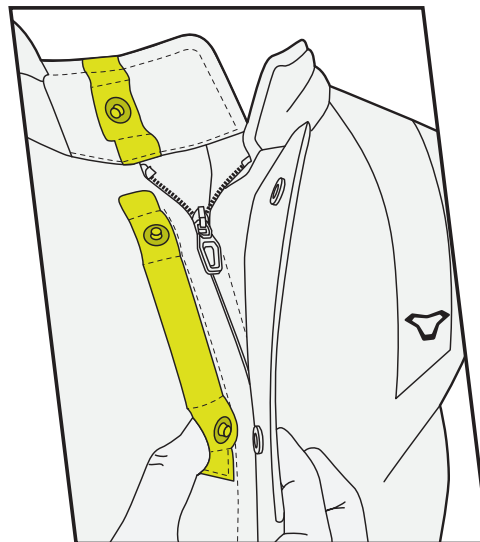

Grabbing a runner or puller whilst wearing motorcycle gloves; it can feel like an Olympic sport at times. Those times are over though! The inner pocket is fitted with a fixed, extended cord to enable quick access and make your ride just that bit easier.

QUIXNAP

SINCE 2023

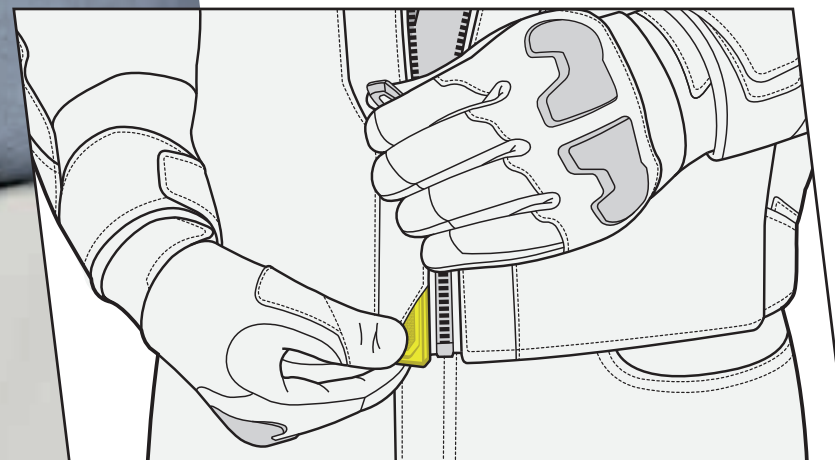

The ideal quick snap for anybody with a minimum of two fingers. We could go on, but that's really all there is to it.

ZIP GRIP

SINCE 2014

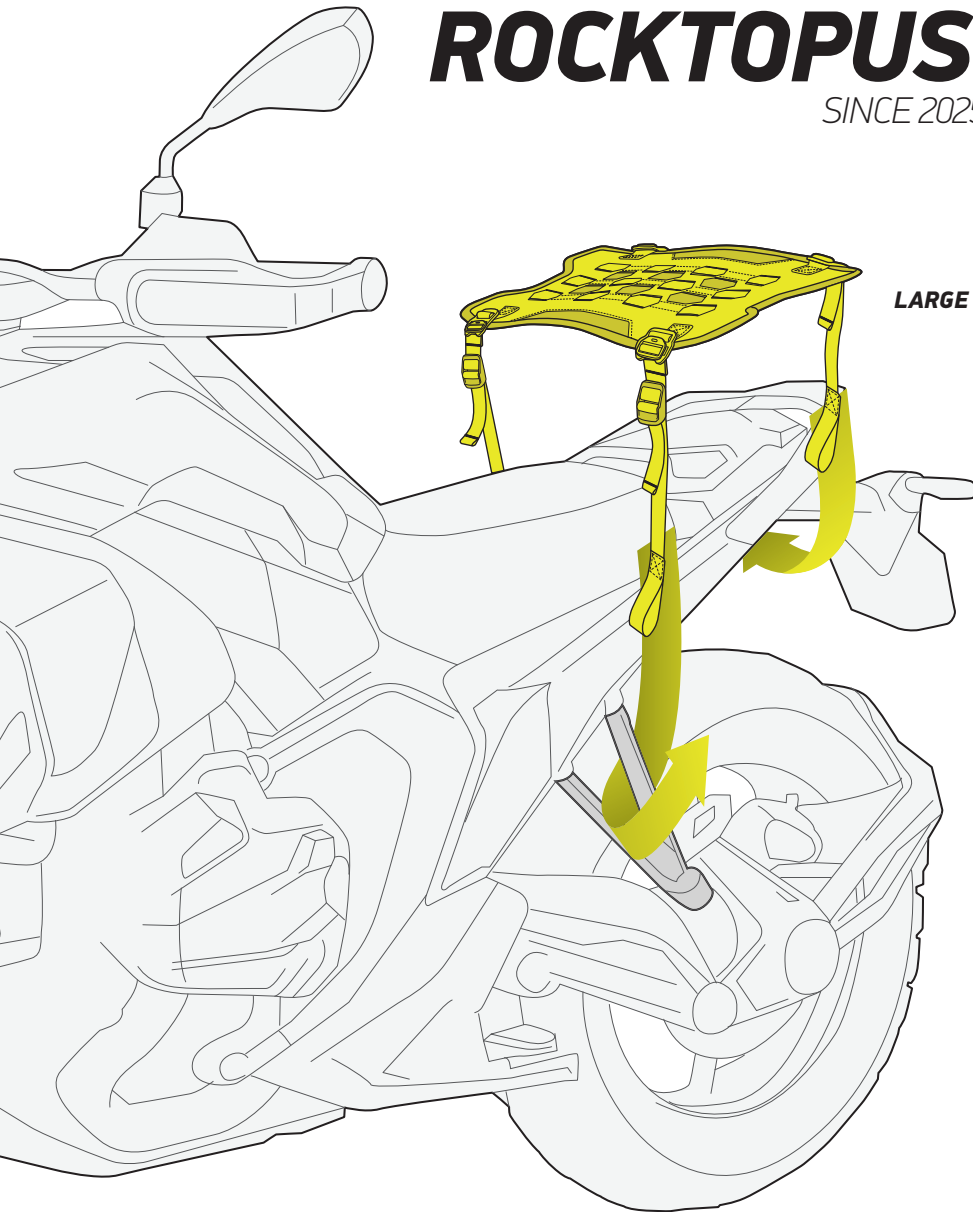

This reinforcement at the insert of the main zip makes it easy to close your jacket when you're wearing gloves. Refined for the second time for near optimal grip.

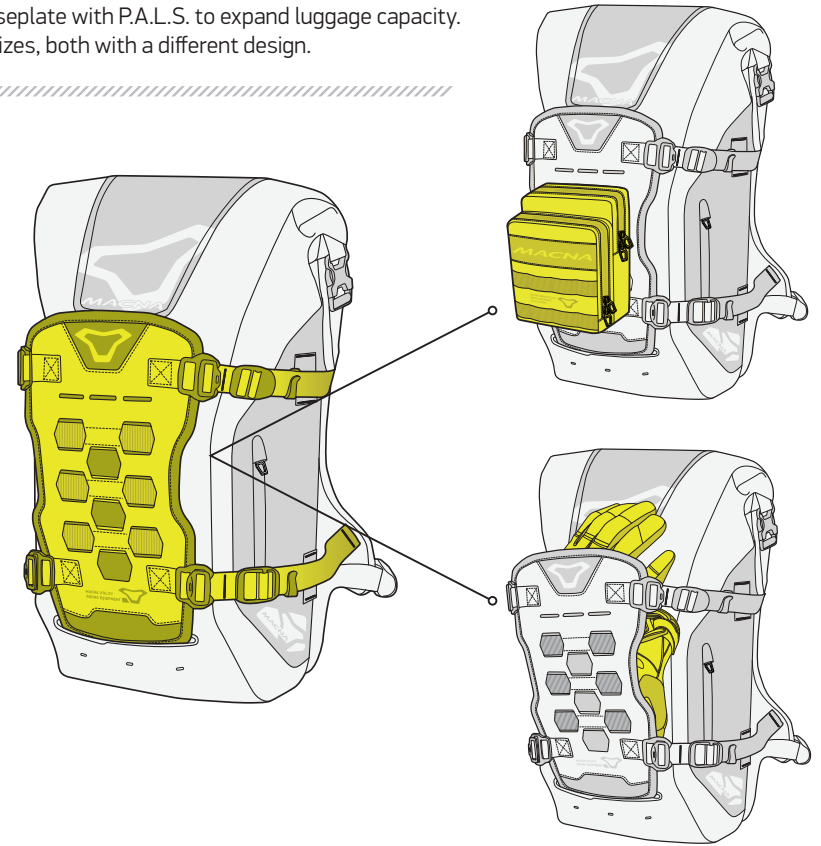

ROCKTOPUS

SINCE 2025

A utility-style baseplate with P.A.L.S. to expand luggage capacity. Available in two sizes, both with a different design.

SMALL

SINCE 2025

QUICK SHIFT COVER

Quick and easy rubber-like protection for the shift lever and/or your boots. Included with footwear and separately available.

VISIBILITY

You might be able to ride like Rossi or armour yourself like a knight of the round table, but that's no guarantee nothing will happen. Other road users can still cause dangerous situations, so being seen is as important as being well protected.

Nowadays, many pieces of riding gear have reflective elements directly on the outer shell. You know, those shiny accents on the front and back of garments - something some of us aren't too fond of. If you're one of those riders, chances are you'll like Night Eye, among others.

If stealthy visibility isn't enough for your peace of mind, you can also find info about products such as our VISION 2C LED light and Vision Tech vest in this section. Many pieces of our gear are prepared for these and other accessories to make sure they're easy to use and look good when using them.

REFLECTIVE NIGHT EYE SINCE 2010

If jackets could have a split personality, they would probably look like this. Common grey by day, incredibly luminous at night: when placed in the range of a car's headlights, it'll light up completely!

So how does this radiant fabric exactly work? Basically, it's coated with lots of tiny beads. They act as satellite dishes, reflecting light back to its source, even from long distances. Indeed, just like a traffic sign!

STEALTH VIZ

SINCE 2023

Cool cats don't like to have their look ruined by garish reflection. To make sure these riders are better visible and don't have to worry about landing on their feet nor their nine lives, we've developed Stealth Viz; subtle reflection underneath the outer shell, incorporated into the overall design of the garment. Safe and stylish.

PREPARED FOR VISION TECH

The jacket features two small buckles to attach the Vision Tech vest with velcro patches. Can be attached and detached at any time and can stay attached without interfering with the jacket.

REFLECTIVE SIDE EYE

SINCE 2010

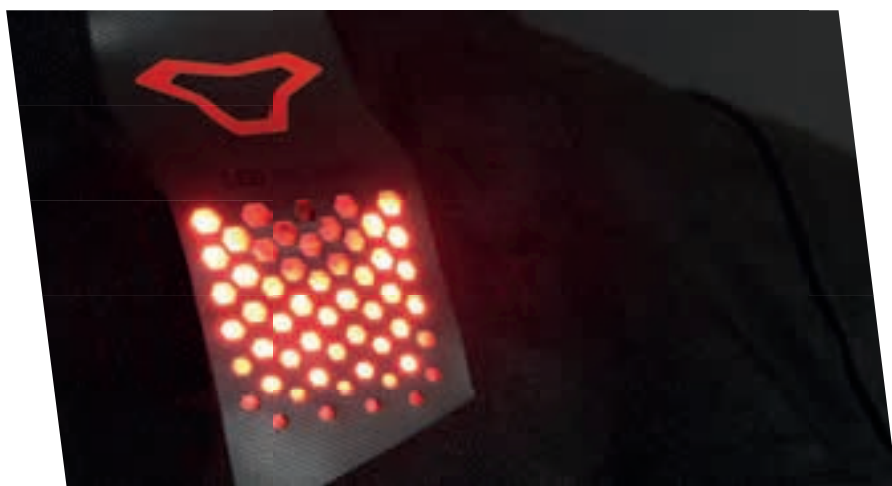

It's Night Eye's little brother - implemented on the flanks on many of our products, boosting your visibility on the sides while still looking discreet by day.

PREPARED FOR LED LIGHT

SINCE 2010

The LED 2C is a visibility boost in the form of a secondary tail light, fixed high up on your back. It's inserted in the integrated pocket, found on many of our touring jackets. It will also fit older models with velcro. The light can be easily charged with a USB-C cable.

INTRODUCING
LEATHER
RIDING GEAR

Leather gear is the epitome of biker wear as it makes any rider look cool, calm and collected. It's extremely durable and safe, which makes it not only top notch gear for casual riders, but also the way to go for racers.

The coming pages will tell you more about racing suits, casual leather jackets, leather pants and everything in between.

MIZURO

A racing suit made of high-end kangaroo leather, developed with professional athletes. A Mizuro consists of the exact same fabrics, protectors, and construction as the MVP GP01 suits of our professional MotoGP riders. A Mizuro can be crafted on three different levels. Level 1 is available from stock. Level 2 and 3 can only be supplied by authorised MACNA Mizuro retailers through the website <https://macna.racing>.

Level 1: Standard sizing and colours.

Level 2: Standard sizing with custom colours.

Level 3: Custom sizing and colours. 100% tailor-made.

A Mizuro is constructed from high-end kangaroo leather, which is the strongest leather out there. It is more flexible and lightweight compared to cow leather. The stretchy parts are made of reinforced Kevlar stretch fabric.

Solid leather provides an average level of ventilation. We also offer the option of perforating the leather to increase the ventilating capabilities. A Mizuro consists of many different panels, all of which can be coloured to the customer's liking. A graphic is optional, as are logos in different areas, and a personal rider logo on the seat area.

Protection is provided in the form of Armax™ protectors, which is our latest and safest addition to our Riders' Impact Safety Concept. Armax™ consists of a base plate underneath the leather and an abrasion-resistant cover on top. The absence of seams in critical areas greatly increases your safety, as seams are normally the weakest part of a construction.

INTRODUCING

WATERPROOF

RIDING GEAR

We prefer nice weather too, but we can't always get what we want, especially in The Netherlands – hence the phrase “we're not made of sugar!” Similar to commuters, we are bound to the mood of mother nature.

This section will tell you all about waterproof gear, from directly laminated pants to jackets with a detachable membrane and everything in between.

INTRODUCING

HOT WEATHER

RIDING GEAR

INCLUDING MEMBRANE

Remember when the weather forecast said it was going to stay dry today? Those grey clouds ahead of you are here to prove the anchorman wrong. Time to zip your waterproof membrane back in your jacket and continue your way carefree.

Over here you'll find gear that is suited for hot riding conditions and ready for (un)expected rainfall.

INTRODUCING
HOT WEATHER
RIDING GEAR

Air Burst is its name, ventilation is its game. Aside from fully ventilated jackets, there are numerous options to prevent overheating, such as ventilations panels, outlets and zips.

In this part of the catalogue, you can find cool(ing) gear that'll make you look meshmerising!

INTRODUCING

ENDURO / MX

RIDING GEAR

Flying through loose sand and over rocks is hard enough as it is without getting overheated or injured. For off-road fanatics, breathability, movability and safety are key features for an enjoyable experience.

On this dirt road, you'll find our brand new enduro and motocross gear; from gloves to shells and from pants to full-fledged all-road jackets.

INTRODUCING

ELECTRICALLY HEATED

GEAR

//////
“How can I stop my fingers from freezing?”
“What’s the alternative to multiple sweaty layers?”
“Why do I need so many batteries in my set-up?”

This chapter holds the answers to all your burning questions. Start your set-up with an electrically heated layer and take temperature control into your own hands – literally!

HEATED APP

DOWNLOAD THE MACNA HEATED APP

The Macna Heated App will let you take full control over your gear. The Bluetooth connection will let you see all products and control them, separately or simultaneously as a group. You can use a timer, see battery status and much more.

Sounds like a lot, but makes controlling your gear fast and simple.

1

EPG CABLE

Cable to connect your Heated Gear for E.P.G prepared Macna Jackets only. (165 8083)

or

2

EXTENSION CABLE

Cable to connect your Heated Gear for Jackets who are not E.P.G prepared. (165 8068)

HEATED GLOVES

Powered by battery in gloves, jacket, or motorcycle.

4

BATTERY OPTIONS

Battery in:

Socks — 7.4V 7.4V - 2.2A
Gloves — 12V 12V 12V 12V - 3A

Connect to Battery in Jacket or Pants:

7.4V 7.4V - 6A
12V 12V - 6A

or

Connect to Bike Battery:

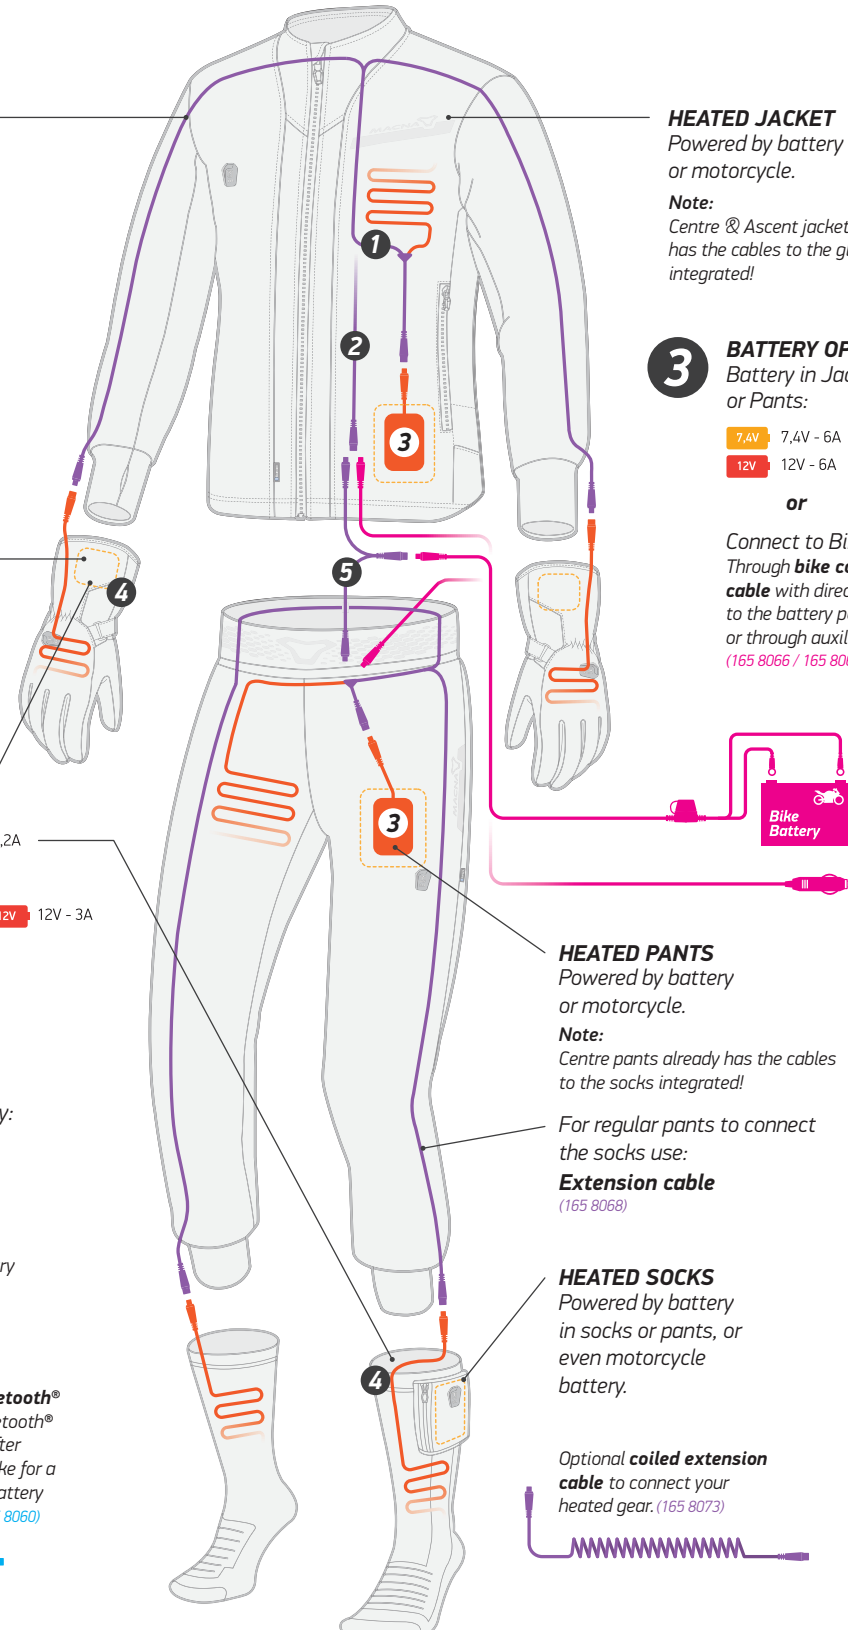

5

Optional **splitter cable** provides power to secondary heated garment. (165 8079)

Optional 'out-of-seat' **Bluetooth battery**, it keeps your Bluetooth products settings active after disconnecting from your bike for a pitstop. (The Bluetooth battery does not heat itself) (165 8060)

HEATED JACKET

Powered by battery or motorcycle.

Note:
Centre & Ascent jacket already has the cables to the gloves integrated!

3 BATTERY OPTIONS

Battery in Jacket or Pants:

7.4V 7.4V - 6A
12V 12V - 6A

or

Connect to Bike Battery:
Through **bike connection cable** with direct connection to the battery poles (165 8065) or through auxiliary socket (165 8066 / 165 8067)

HEATED PANTS

Powered by battery or motorcycle.

Note:
Centre pants already has the cables to the socks integrated!

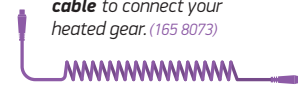

For regular pants to connect the socks use:

Extension cable (165 8068)

HEATED SOCKS

Powered by battery in socks or pants, or even motorcycle battery.

Optional **coiled extension cable** to connect your heated gear. (165 8073)

BATTERY AND ACCESSORY OPTIONS

BLUETOOTH BATTERY

When you disconnect your heated gear from your bike battery during a stop, your gear will lose its juice. This means you have to re-activate each heated garment separately before you can take off again.

Our BT Battery makes this an issue of the past. This out-of-seat system is placed between power supply and garments. It functions like a BT hotspot and keeps your set-up active without heating, whilst you stretch your legs. After re-connecting to your bike battery, the BT Battery is the central switch that allows you to continue the ride at the push of a single button and enjoy the heat.

 **Bluetooth®**

Bluetooth® battery, it keeps your settings active after disconnecting from your bike for a pitstop.

B.T. BATTERY

BLUETOOTH BATTERY BACKUP KIT

Out-of-seat Bluetooth battery, it keeps your settings active after disconnecting from your bike battery for a pitstop. The Bluetooth® battery does NOT heat clothing without being connected to a power supply.

INTRODUCING
FOOTWEAR

This year marks the release of a brand-new product group for us: footwear!

We've started off with two pairs of boots and three pairs of sneakers, aiming for a suitable pair for every rider.

All models are equipped with an innovative, in-house developed sole for high comfort on and off the motorcycle.

Some models are also fitted with a waterproof HDry or Raintex membrane.

INTRODUCING **GLOVES**

Gloves might just be the most diverse and accessible section of a range. With numerous different constructions, colours and differentiators, gloves are the easiest way to give your style a new twist.

The following pages contain (a lot of) gloves; from breathable mesh to waterproof gloves and from thermal lined to leather racing gloves.

COOLING VEST EVO

ART. NO
• 165 8055

SIZES
• S/M, L/XL, XXL/3XL,
4XL/5XL

COLOURS
• 808

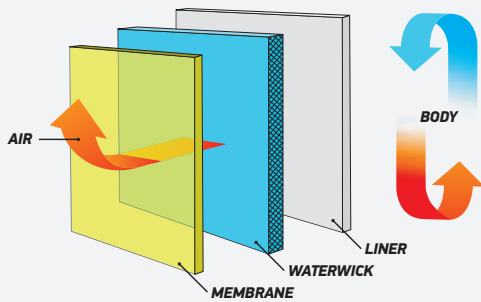

MATERIALS
• Polyamide
• Polyester
• Core Rayon

COMFORT
• Ventilation holes
• Macna Ziplock closure

THE PRINCIPLE

The heat from body and surrounding air make the water inside the vest vaporise. It causes the surface and your skin to cool down in a dry way before you become sweaty.

**MIX AND MATCH YOUR OWN MACNA STORE STEP-BY-STEP
WITH OUR CUSTOMIZABLE MODULAR SYSTEM**

SHOP SYSTEM 2.0

SHOP SYSTEM 2.0

STEP 1:

Choose the base shelves:

High Frame (type A or B) and/or Low Frame (A or B)

Always start with frame A, then extend by adding B's.

Back-to-back construction is possible (bracket set required).

Low Frame A

Low Frame B

High Frame A

High Frame B

i Extra stabilizer panel is added to A frames. The panel is used to reinforce the last B frame.

STEP 2:

Pick your headers.

For the best effect, alternate between different header boards.

ALL SIZES ARE IN CENTIMETRES

All mentioned SIZES are an indication. When choosing a product SIZES according to mentioned body SIZES you should take the variation from the standard sizing in consideration. If for example you have a waist SIZES M and the hip SIZES L, you will need to choose SIZES L. Only occasionally will one persons different SIZES match all measurements within the same standard SIZES. For optimum safety and comfort we recommend to wear the products slim fit. For the best fitting you are advised to visit your local dealer.
